

HSE DIGITAL TRANSFORMATION

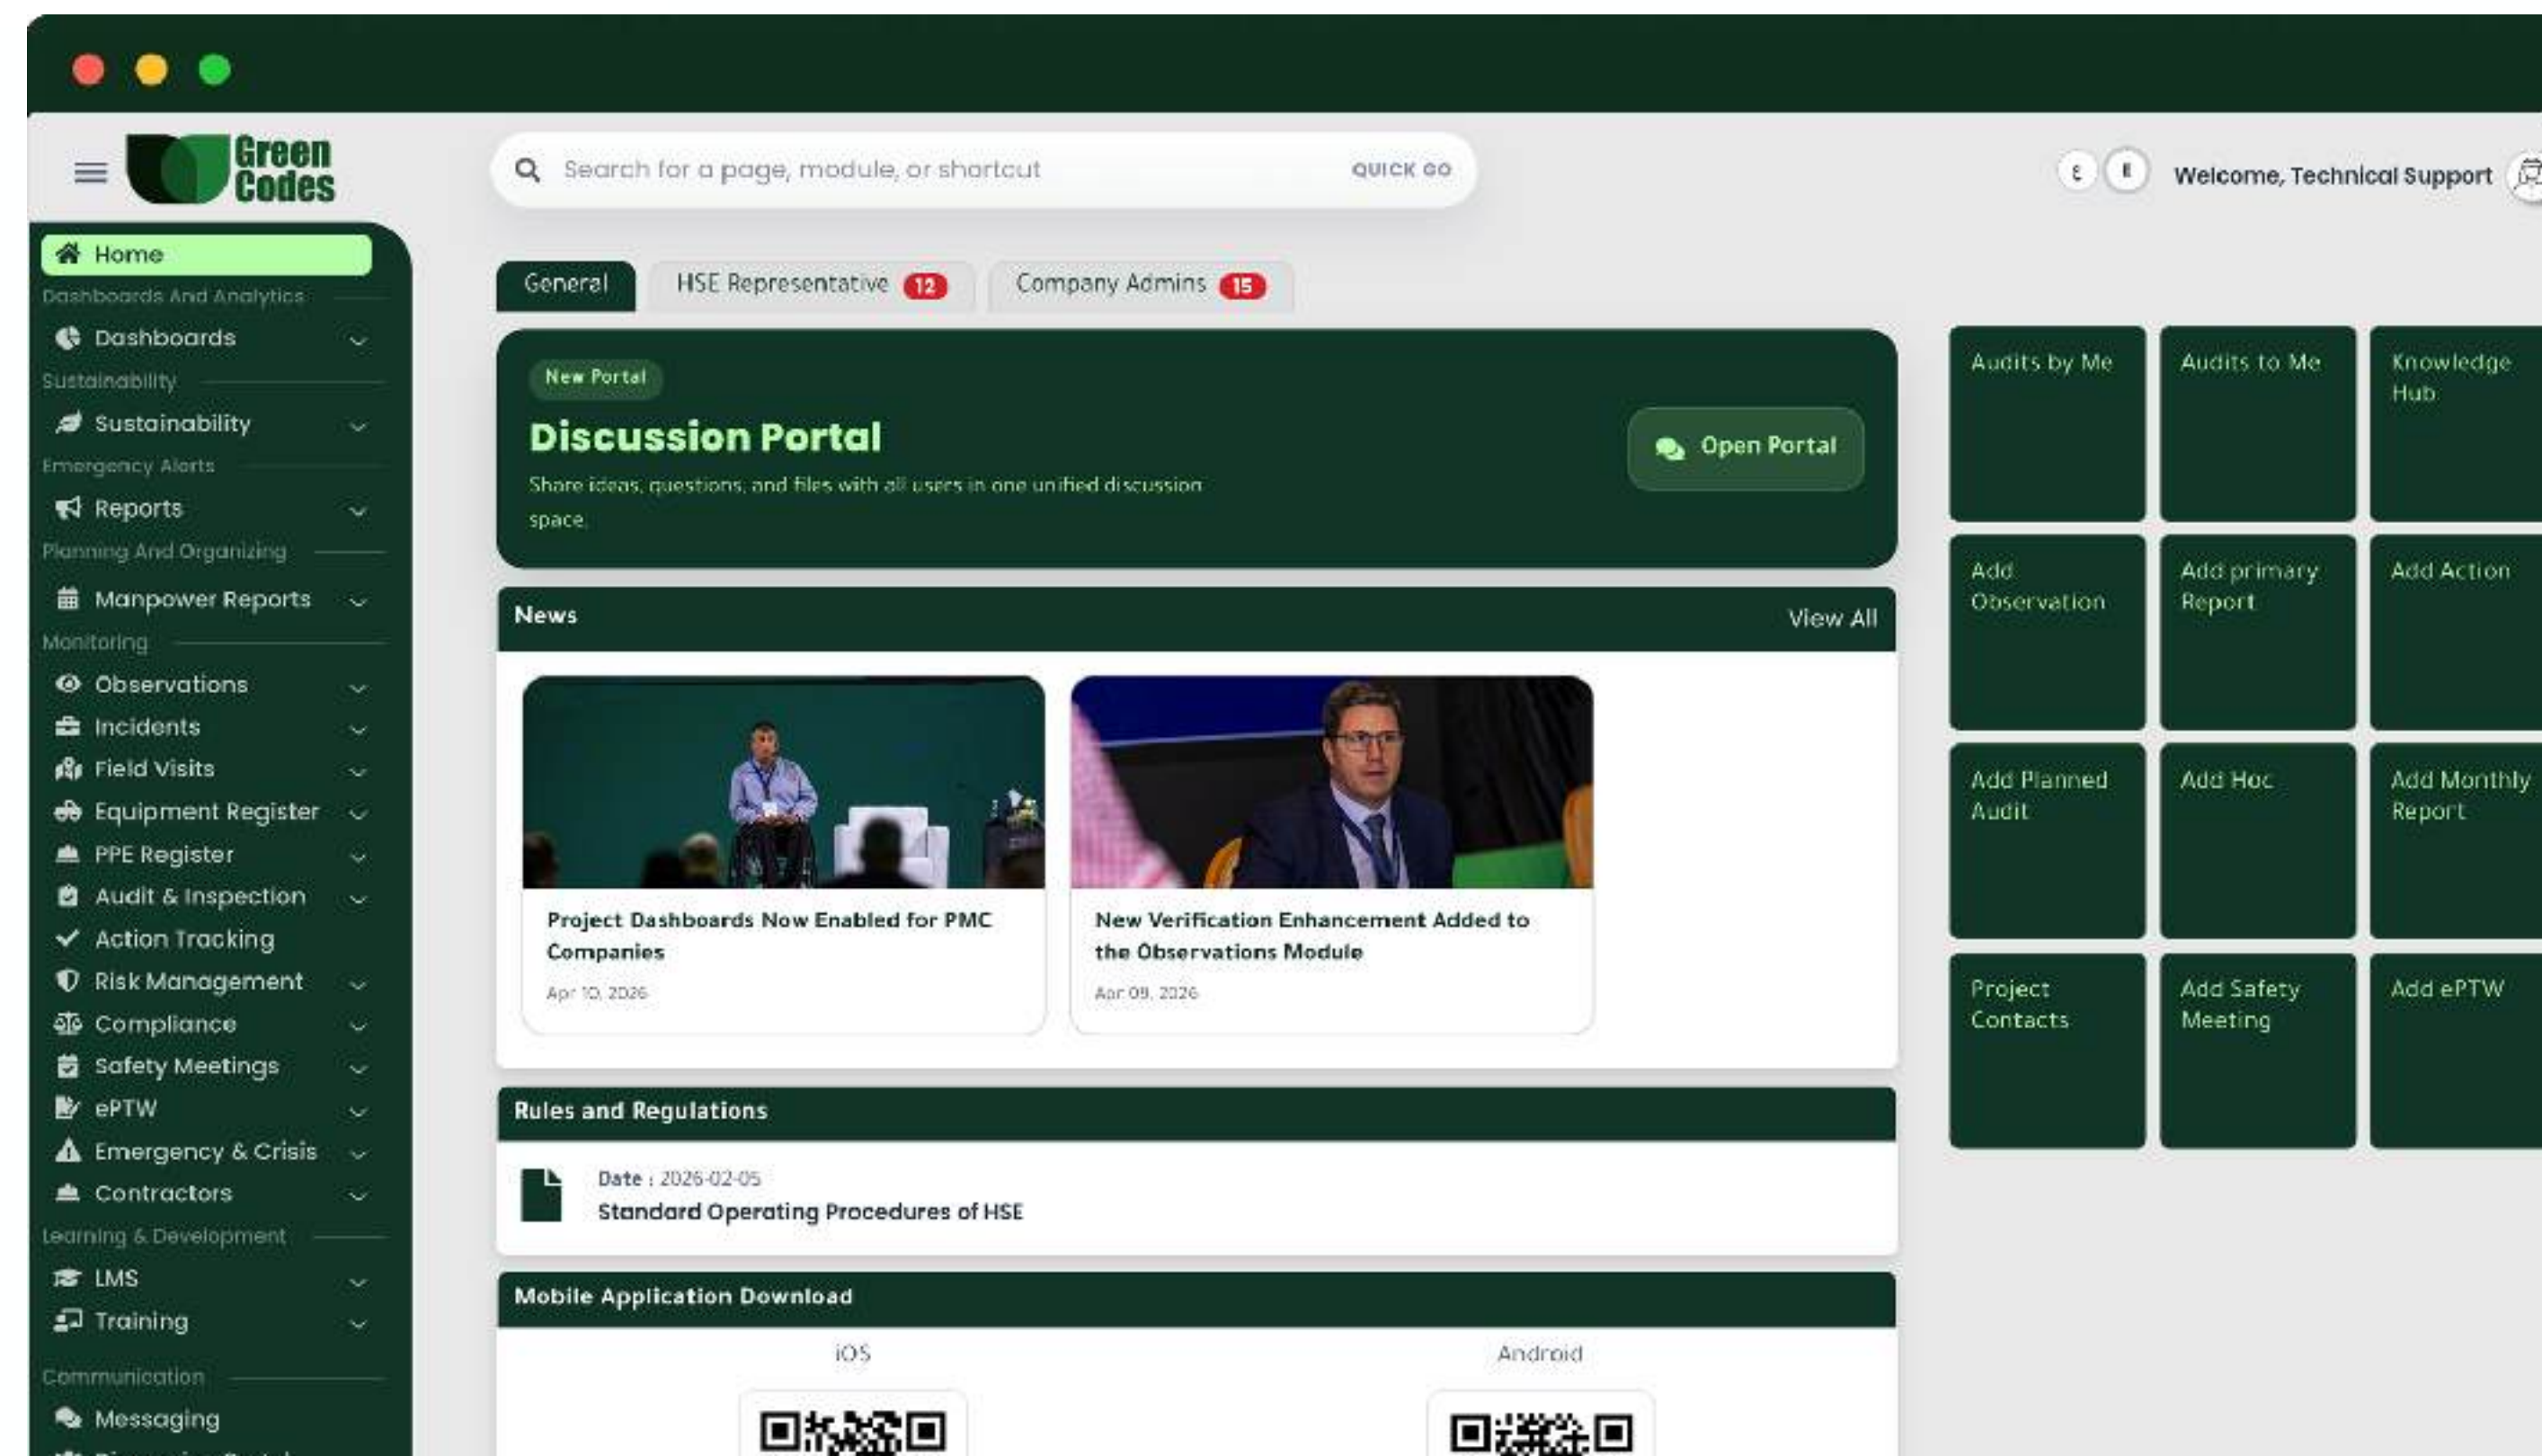

Occupational Safety, Health, and Environment Application

An integrated digital platform for managing occupational safety and health, helping organizations record incidents, track observations, manage risks, and analyze data to improve performance and strengthen compliance.

[Learn More About Green Code Platform](#)

What is the Green Codes Application?

Green Codes Platform is a fully integrated digital solution for managing occupational safety and health, designed to support government entities and companies in enhancing compliance and improving operational efficiency. The platform provides advanced tools for managing incidents, observations, risks, reports, inspections, audits, and all supporting systems related to occupational safety and health, helping organizations build a safer and more sustainable work environment.

Compliance with international HSE standards

Green Codes Platform is designed to ensure full compliance with international Health, Safety, and Environmental (HSE) standards and best practices across all industries. The system supports organizations in aligning their operations with globally recognized standards such as ISO 45001 for Occupational Health and Safety Management, ISO 14001 for Environmental Management, ISO 9001 for Quality Management, and ISO 31000 for Risk Management.

Alignment with International Standards

Green Codes helps organizations, entities, and projects strengthen safety, compliance, and sustainability practices through an integrated digital platform that improves operational efficiency, enhances follow-up, and supports data-driven decision-making.

Institutional Digital Transformation

Governance and Transparency

Operational Efficiency and Productivity

Global transformation strategies focus on improving efficiency and creating environments that support growth and operational excellence. Green Codes supports this by shortening follow-up cycles, reducing manual work, improving data accuracy, and enhancing response speed for observations, incidents, and corrective actions. The result is a more organized operational environment, faster decision-making, and stronger performance management across projects, facilities, and multi-site organizations.

Supporting Sustainability and Efficient Resource Management

As part of global sustainability goals and improving quality of life, digital platforms play a key role in helping organizations monitor resources, reduce waste, and improve environmental and operational performance. Green Codes contributes to this through supporting sustainability indicators, tracking resource consumption, documenting related data, and providing management with clearer visibility into continuous improvement opportunities. This aligns with international sustainability initiatives and best practices.

Better Work Environments with Greater Safety and Quality

International standards place strong emphasis on quality of life and creating better environments for individuals and communities. In the institutional context, Green Codes supports this direction by improving safety management, enhancing risk response, and strengthening preventive monitoring across workplaces and facilities—helping organizations build safer, more stable environments for employees and stakeholders.

Green Codes Application Features

Application Features

Green Codes Application provides a set of advanced features that help organizations improve safety management, increase operational efficiency, and achieve compliance with the highest standards.

Multi-Language Support

The platform supports multiple languages, making it easier for different nationalities and working teams across projects inside the Kingdom to use the system efficiently.

Flexible Hosting

Green Codes can be deployed either on the cloud or on the client's internal servers (On-Premise), ensuring compliance with cybersecurity policies and government entity requirements.

Reports and Dashboards

The platform provides real-time reports and interactive dashboards that support decision-makers in monitoring performance and analyzing data quickly and accurately.

Mobile Application Integration

Green Codes allows users to access the system through mobile applications, enabling them to record incidents, observations, and track actions from anywhere at any time.

Fast and Easy Implementation

The platform is designed for quick deployment and easy operation, allowing organizations to start using the system within a short time without unnecessary complexity.

Flexible System Integration

Green Codes supports seamless integration with ERP, HR, and other enterprise systems, ensuring smooth data flow between different platforms and departments.

Compliance with Saudi Building Code (SBC)

The platform is designed to align with the requirements of the Saudi Building Code (SBC), helping organizations improve compliance and reduce operational risks.

International Standards

Green Codes follows international best practices and standards in safety management while supporting full digital documentation of procedures to ensure formal approval and compliance.

Customer Testimonials

Discover our clients' experiences with Green Codes Application and how it has helped improve safety management, increase compliance levels, and enhance operational efficiency across various projects.

Green Codes helped us transition from traditional safety management to a fully integrated digital system that keeps pace with modern project requirements. We can now monitor all activities in real time, from daily observations to advanced performance reports and analytics. The system also improved communication between different work teams, reduced errors, and increased procedural compliance. The application is easy to use and supports both office and mobile work, making it an effective tool for everyone working in the safety field. We believe Green Codes is a fundamental step toward achieving a safer and more sustainable work environment.

Gamal Fathy
Petroleum Ministry Consultant

Since we started using the Green Codes Application, we have witnessed a significant improvement in occupational safety and health management across our projects. The platform provided us with advanced tools for performance monitoring and instant data analysis, which helped us improve operational efficiency and reduce incidents. What makes the application special is its full integration and ease of use by different teams, whether in the field or at the management level. Reports and dashboards provide clear visibility that supports fast and effective decision-making. Green Codes has become an essential part of our safety management system.

David Robenson
HSE Manager - Qiddiya

Relying on the Green Codes Application was a real turning point in managing occupational safety and health within our operations. Before using the system, procedures depended heavily on manual work and traditional follow-up, which limited response speed and reporting accuracy. Today, we have a fully integrated digital platform that enables us to record incidents and observations, track corrective actions in real time, and access clear dashboards that support decision-making. Green Codes has helped us improve our compliance level, reduce risks, and enhance the efficiency of our work teams, which has had a direct positive impact on the work environment and operational performance.

Mohamed Osama
HSE Manager - Mondelez

We Empower Organizations to Achieve a Safer Workplace

Horizon Company presents its Green Codes application as one of the leading integrated digital solutions for Occupational Health, Safety, and Sustainability Management. It helps companies improve performance, reduce risks, and comply with international standards through a smart and easy-to-use platform.

We support organizations across various sectors in managing health and safety systems efficiently through an advanced digital platform that enhances decision-making, strengthens safety culture, and ensures compliance with international standards.

Vision and Mission

Our vision is to be one of the leading providers of specialized digital solutions for occupational health, safety, and sustainability management, empowering organizations to build safer and more efficient work environments through smart technologies that support compliance, enhance performance quality, and improve operational readiness.

Our mission is to deliver, through Green Codes, an integrated digital platform that helps organizations across various sectors manage occupational health, safety, and sustainability systems more effectively through flexible tools that support decision-making, simplify follow-up

At Green Codes, we believe that the future of occupational health, safety, and sustainability management depends on shifting from fragmented traditional procedures to a unified, smart, and user-friendly digital system. Based on this vision, we develop digital solutions that help organizations improve operational efficiency, strengthen compliance, and enhance monitoring and decision-making capabilities, resulting in safer people, higher-quality processes, and more sustainable business operations.

Our Vision

To be one of the leading companies in providing specialized digital solutions for managing occupational health, safety, and sustainability, and to empower organizations across various sectors to build safer, more efficient work environments with greater ability to achieve compliance and operational excellence.

We strive for Green Codes to become a trusted reference for organizations seeking a practical and flexible digital platform that helps transform safety and sustainability requirements from paper-based procedures into clear, measurable operational practices supported by data and analytics.

We aim for our solutions to be part of the journey of modern institutional transformation by supporting governance, improving follow-up quality, reducing risks, and strengthening the culture of safety and sustainability within work environments.

Our Mission

Our mission is to provide an integrated digital platform that helps organizations manage occupational health, safety, and sustainability systems more efficiently through smart and flexible tools that support documentation, monitoring, analysis, and the management of daily procedures in a more organized and transparent way.

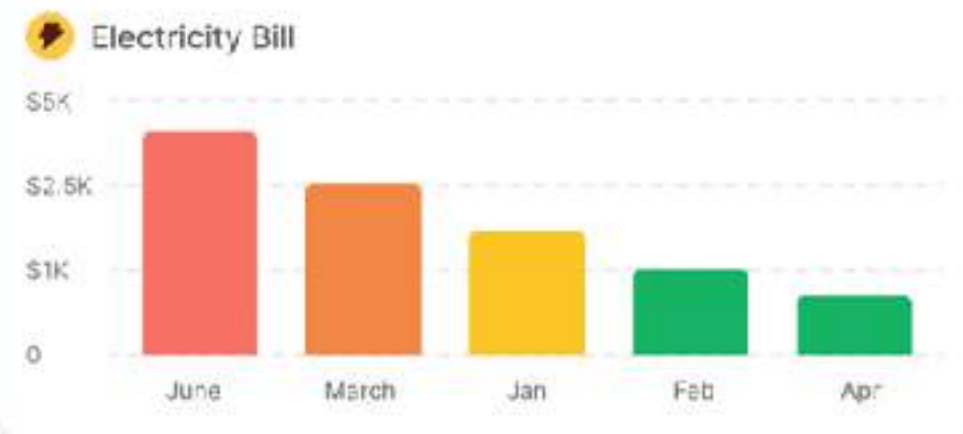

We work to enable companies and operational entities to gain better control over their operations through solutions that support managing risks, incidents, observations, inspections, permits, documents, and corrective actions within one unified platform, making follow-up easier, improving response speed, and enhancing decision quality.

We also ensure that our solutions remain closely aligned with the reality and operational needs of our clients. Therefore, we focus on flexibility, ease of use, and customization, ensuring that technology becomes a real value that supports institutional performance and sustainable growth.

Why Do We Believe in What We Offer?

Real Operational Value

We believe that digital solutions should provide a tangible impact on daily operations by organizing procedures, unifying data, and simplifying follow-up processes, which improves performance efficiency and reduces waste and delays.

Improving Energy Consumption Efficiency

Our solutions help organizations monitor energy consumption more clearly, enabling them to identify improvement opportunities, reduce waste, and enhance daily operational efficiency.

Greater Sustainability and Better Compliance

We help organizations strengthen the culture of safety and sustainability.

Flexible and Scalable Solutions

We designed Green Codes to adapt to the needs of different sectors through flexible workflows and operational models that can be customized according to the nature of each organization, making implementation more effective and closer to real operational requirements.

Alignment with International Standards

Green Codes contributes to empowering organizations, institutions, and projects to enhance safety, compliance, and sustainability practices through an integrated digital platform that helps improve operational efficiency, strengthen monitoring processes, and support data-driven decision-making in alignment with international standards and global best practices.

Contact us →

International standards focus on building sustainable organizations, operational excellence, and continuous improvement, with strong emphasis on institutional transformation, service quality enhancement, private sector empowerment, and improving overall performance efficiency. From this perspective, the Green Codes platform was designed to serve as a digital solution that helps organizations transform safety, compliance, and sustainability processes from scattered traditional practices into a unified operational system that is measurable, trackable, and continuously optimized.

The platform supports organizations in creating a more digitally mature work environment through the automation of forms and procedures, structured access management, proper documentation of operations, and improved reporting and performance monitoring capabilities. This aligns with global best practices for digital transformation, operational efficiency, transparency, and institutional effectiveness, while ensuring compliance with international standards and supporting sustainable business growth.

Incident Management

An integrated platform for managing incidents
and alerts that helps you record events.

The Incidents and Alerts Management System within the Green Codes platform provides a fully integrated digital solution for managing all types of incidents and alerts with high efficiency. It starts from recording field incidents and reports, followed by investigations and root cause analysis, all the way to implementing corrective and preventive actions. The system allows organizations to easily record incidents through the web platform or mobile application, with the ability to attach photos, voice notes, and accurately identify locations. This helps accelerate response time and improve data accuracy. The system also supports generating instant reports and interactive dashboards that help analyze trends and identify high-risk areas, enabling decision-makers to take proactive actions to reduce incidents and improve the work environment.

This is done within a framework that supports compliance with approved regulations and standards such as the Saudi Building Code (SBC), while strengthening the culture of occupational safety and health within organizations.

Contractor Management

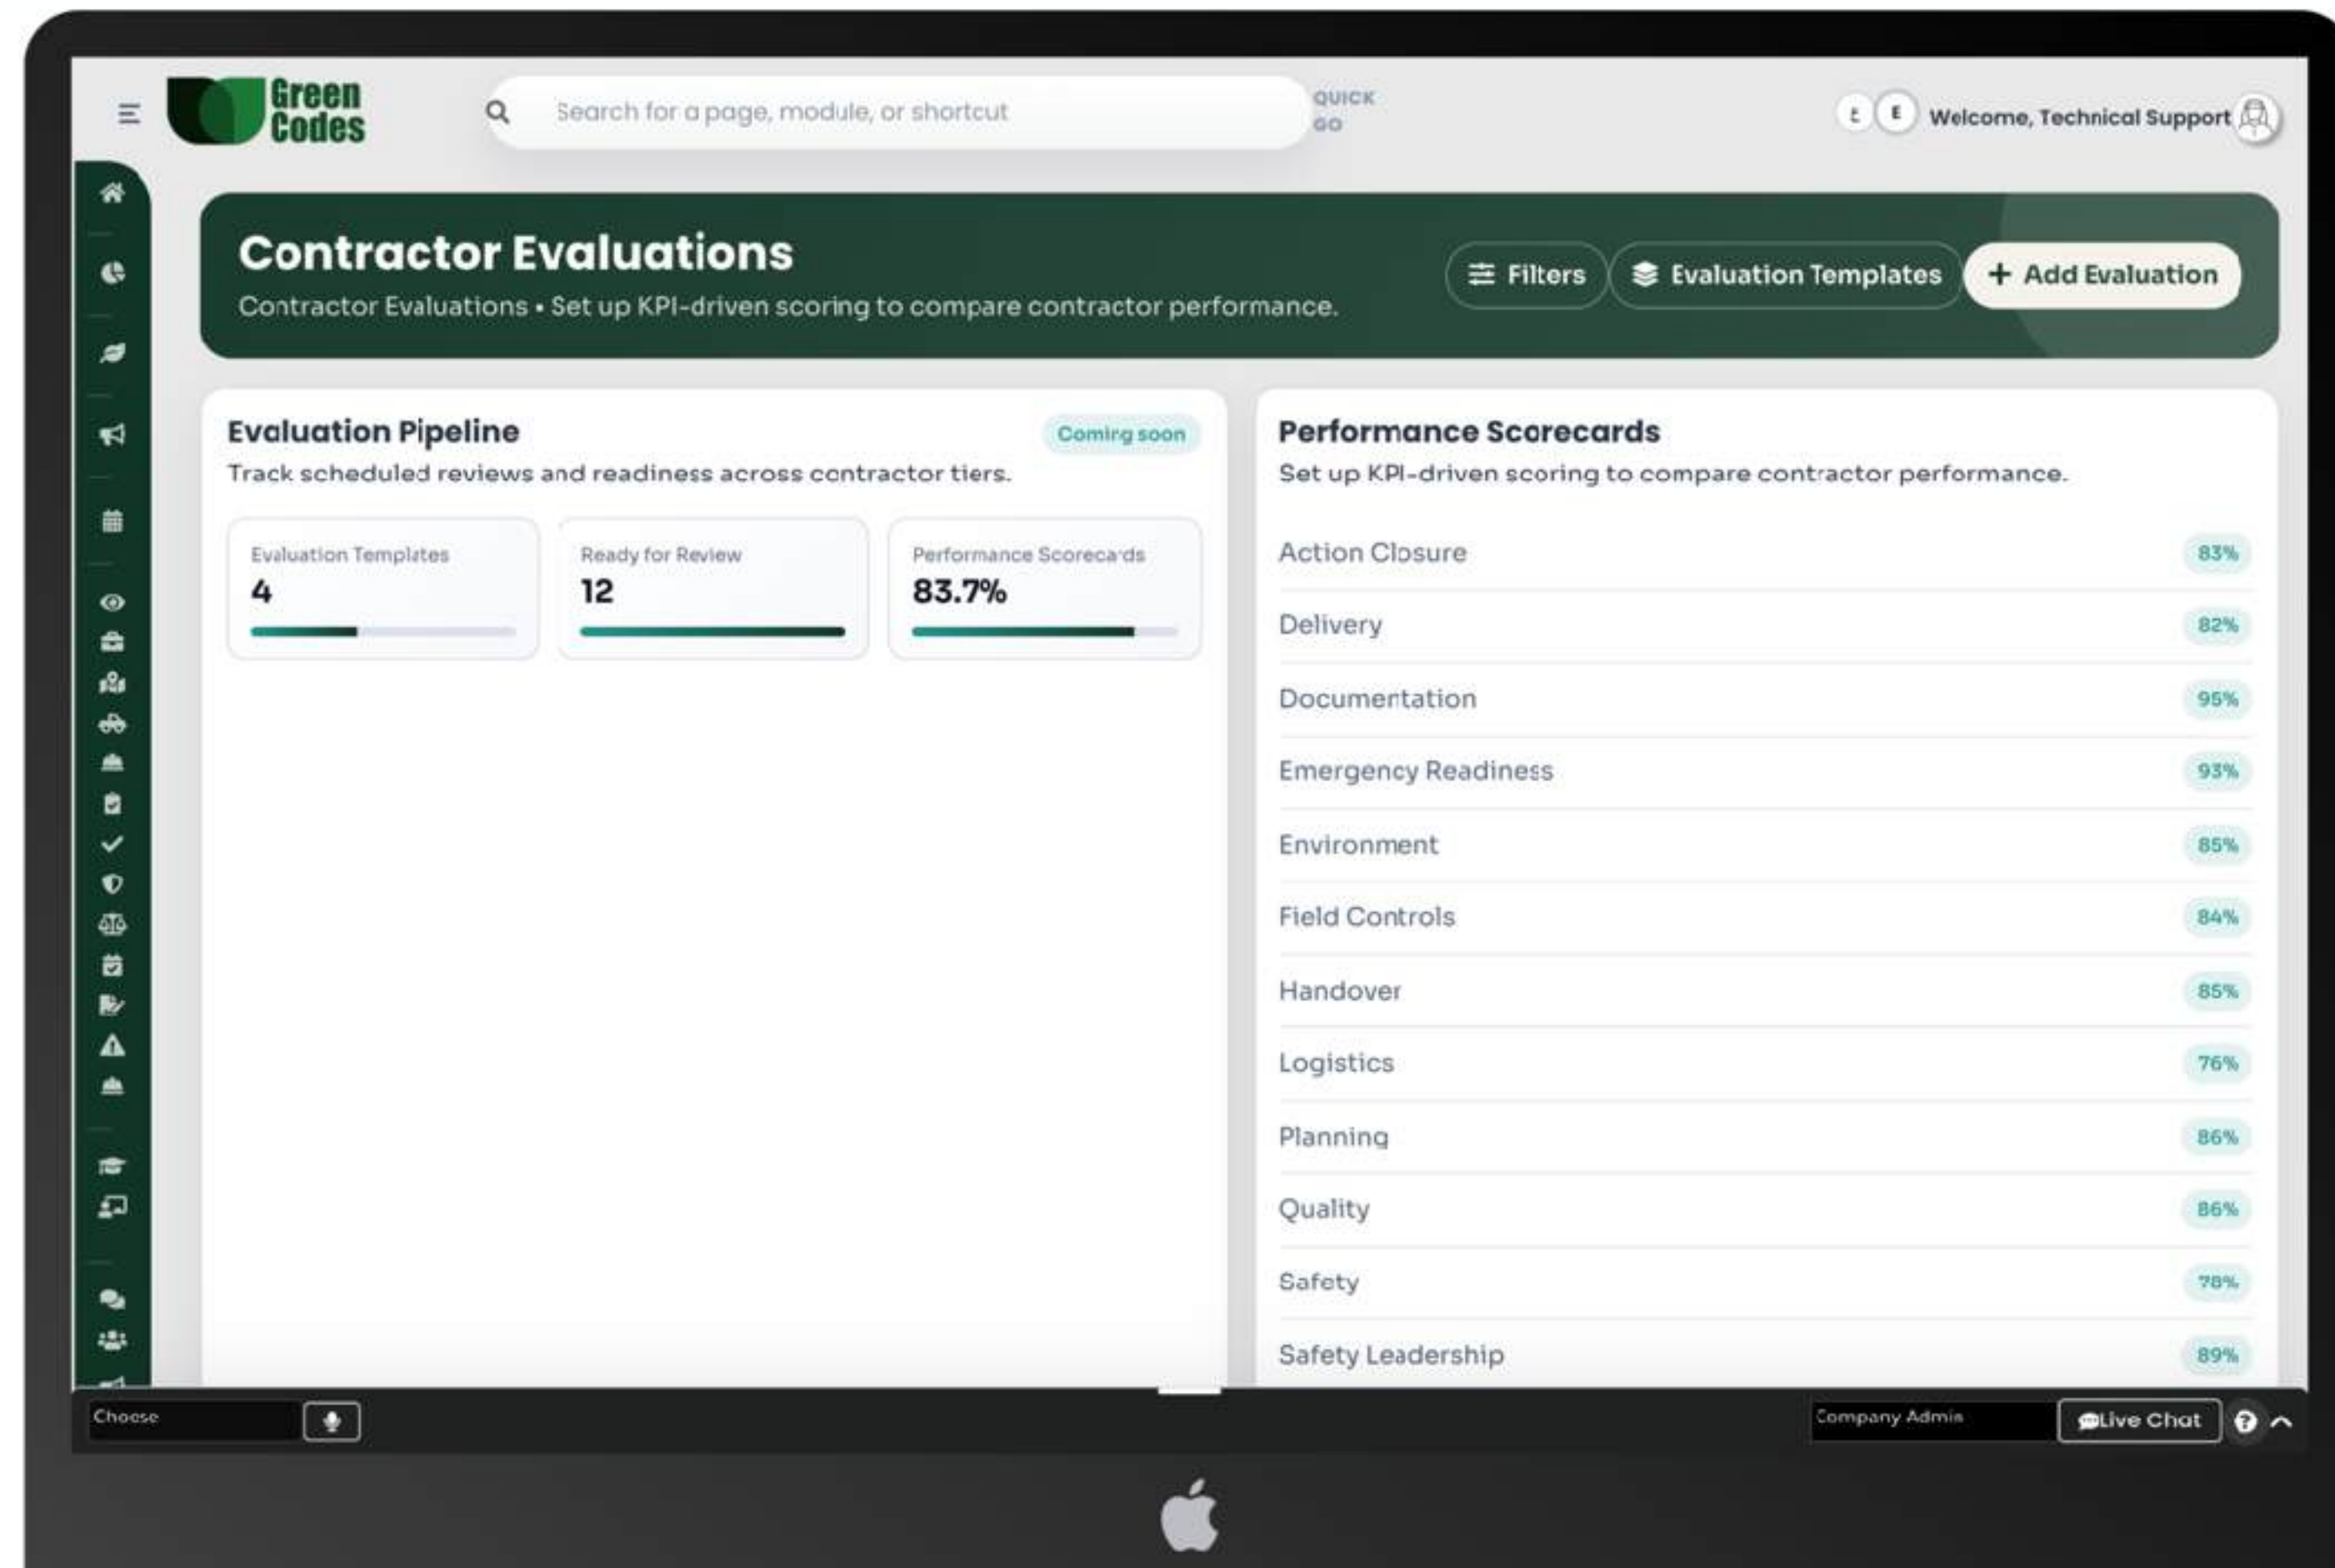

An integrated platform for managing contractor data, monitoring performance, and ensuring compliance with safety requirements.

The Contractor Management System within the Green Codes platform provides a complete digital solution for organizing and monitoring all contractor, consultant, and service provider activities across projects and facilities with high efficiency.

It starts from registering contractor companies and service providers, approving documents and licenses, and continues with tracking workforce, equipment, and work-related permits, all the way to evaluating contractor performance and compliance with occupational health and safety requirements.

The system allows organizations to manage contractor data easily through the web platform or mobile application, with the ability to upload documents, monitor expiry dates, and send automatic alerts for renewals and mandatory requirements. This helps improve governance, reduce operational risks, and ensure business continuity.

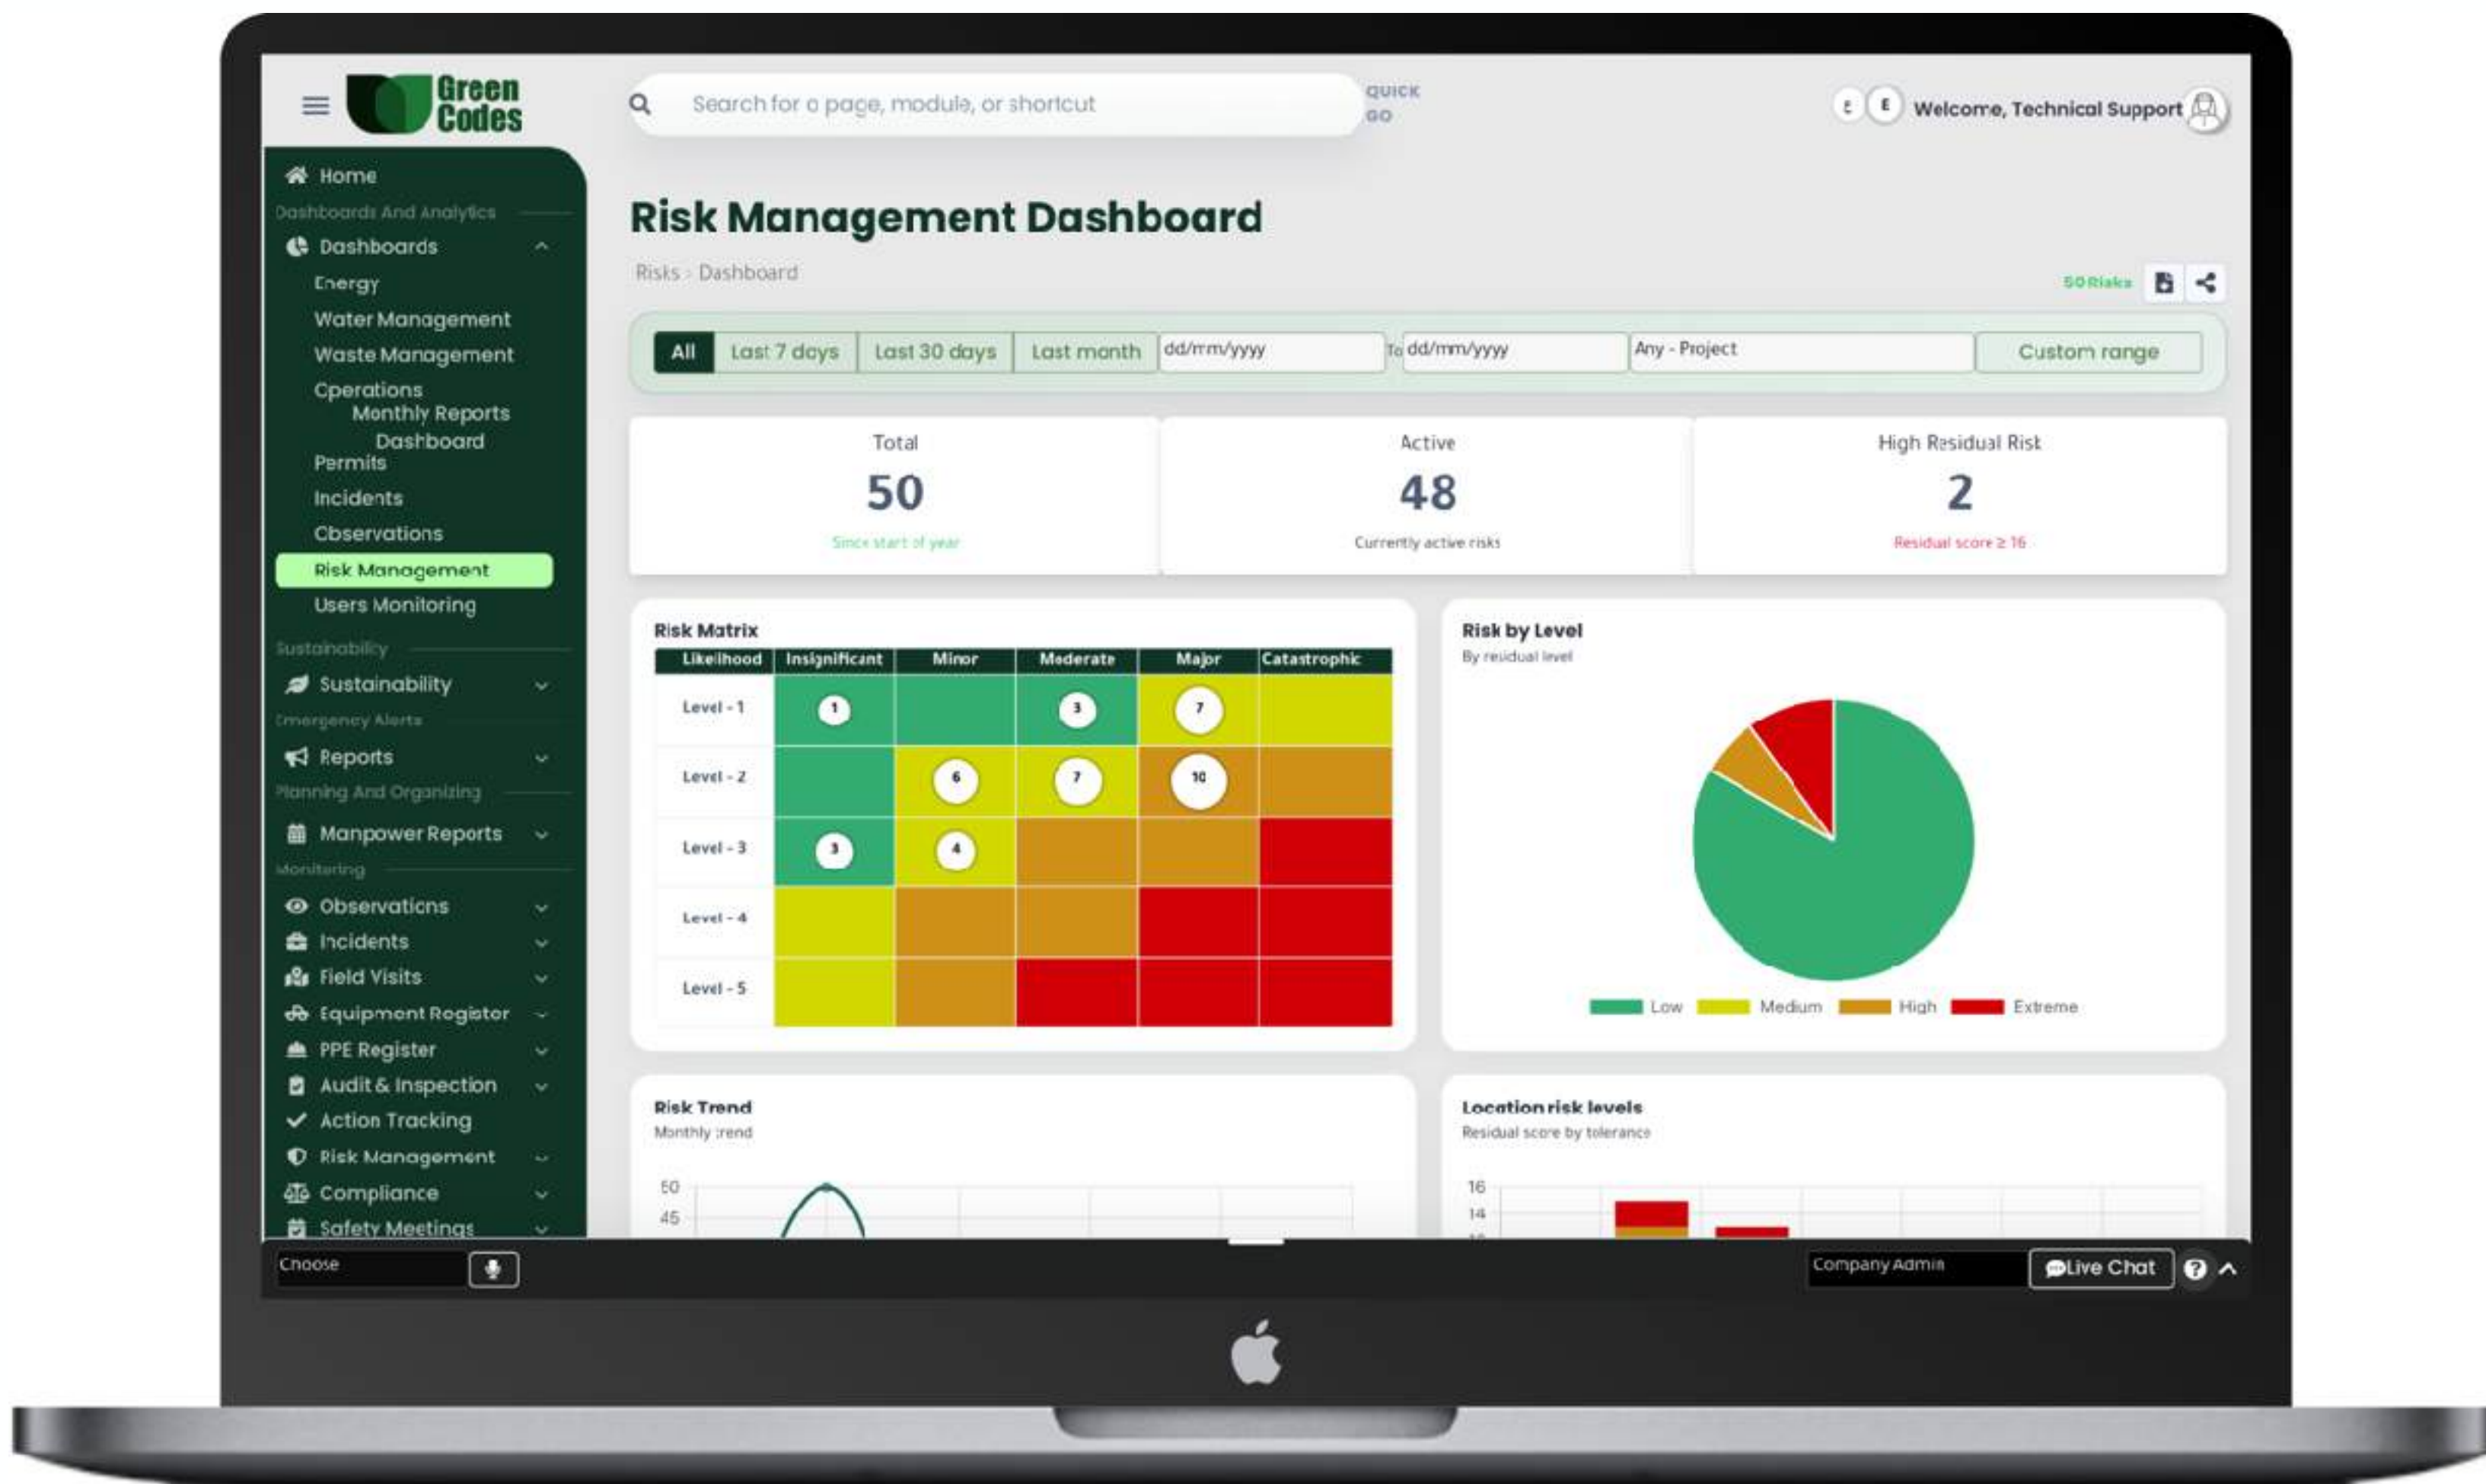

The system also supports instant reporting and interactive dashboards that help monitor contractor performance, safety compliance rates, completion indicators, and quality standards. This enables decision-makers to evaluate contractor efficiency and take proactive actions to ensure operations continue according to the highest standards. It also supports compliance with approved regulations and standards, while enhancing execution quality, safety performance, and compliance levels across projects and facilities.

Risk Management

An integrated platform for identifying risks, assessing them, and proactively tracking the necessary actions to minimize them.

The Risk Management System within the Green Codes platform provides a complete digital solution for identifying, assessing, and monitoring all types of operational, environmental, occupational health, and safety risks with high efficiency. It starts with recording potential risks and classifying them based on activities and locations, followed by evaluating the level of risk using probability and impact matrices, and ending with creating control plans, preventive actions, and monitoring their implementation. The system allows organizations to register risks easily through the web platform or mobile application, with the ability to link each risk to its related location or activity, and attach photos, notes, and supporting documents. This helps improve assessment accuracy and accelerate response to potential risks. It also supports instant reporting and interactive dashboards that help analyze risk levels, identify high-priority areas or activities, and monitor performance indicators related to mitigation plans. This enables decision-makers to take proactive actions to reduce incidents, losses, and continuously improve the work environment.

Safety Observations

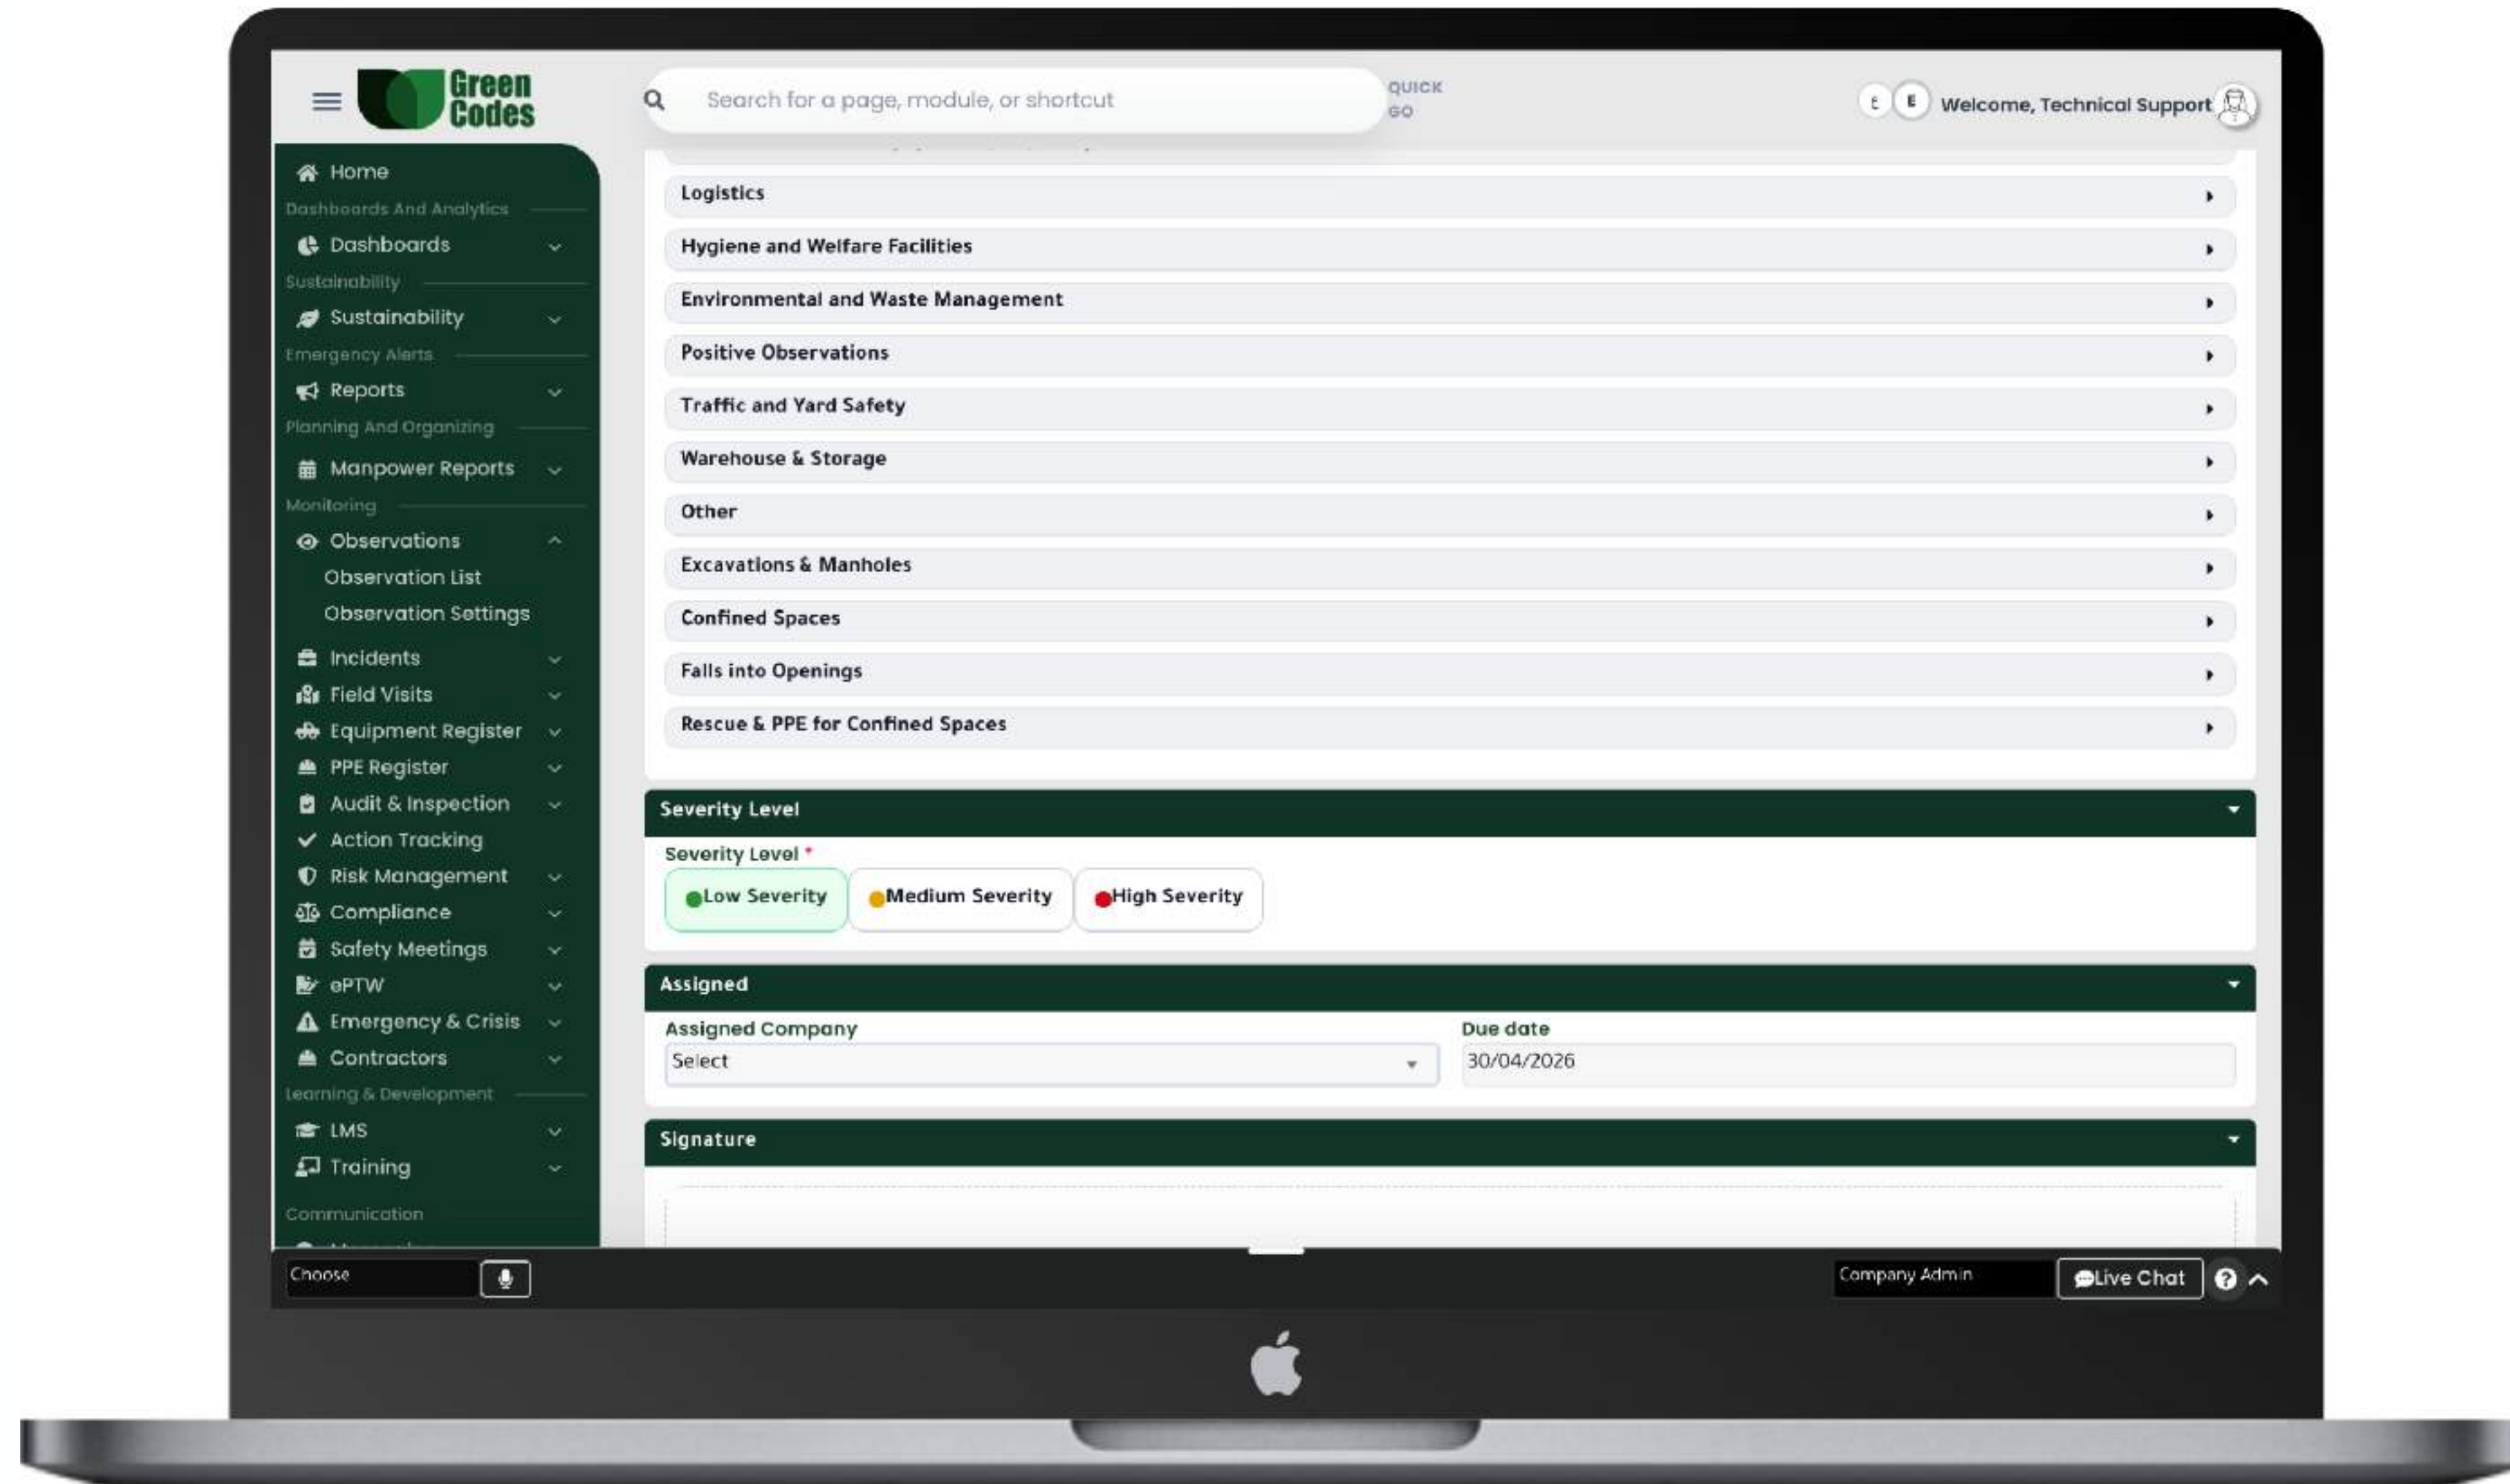

An integrated platform for recording, tracking, and analyzing safety observations to enhance safe behavior across work sites.

The Safety Observations System within the Green Codes platform provides a complete digital solution that enables organizations to record and manage all safety observations, positive observations, and unsafe practices with high efficiency.

It starts with capturing field observations and documenting them instantly, followed by classifying them based on type, location, and risk level, and ending with tracking corrective actions and closing observations after verifying the resolution.

The system allows users to register observations easily through the web platform or mobile application, with the ability to attach photos, voice notes, and accurate location details. This helps accelerate reporting, improve data quality, and enhance immediate response across work sites.

It also supports instant reporting and interactive dashboards that help analyze trends, identify the most frequent observation areas, monitor closure rates, and measure team engagement levels. This enables decision-makers to take proactive actions to reduce risks and continuously improve the work environment.

Audit and Inspection

An integrated platform for conducting inspections and audits and tracking observations to ensure compliance with standards.

The Inspection and Audit System within the Green Codes platform provides a fully integrated digital solution for managing and executing all field inspections and audit activities with high efficiency. It starts from preparing inspection checklists and customized forms based on the type of activity or project, followed by conducting field inspections, documenting observations and findings, and ending with generating reports and following up corrective actions until final closure.

The system allows organizations to perform inspections and audits easily through the web platform or mobile application, with the ability to attach photos, voice notes, and accurately determine locations. This helps improve the quality of review processes, accelerate the detection of gaps, and enhance compliance across work sites.

The system also supports generating instant reports and interactive dashboards that help analyze inspection results, monitor compliance rates, and identify locations or departments that require priority action. This enables decision-makers to take proactive actions to strengthen compliance, improve operational performance, and raise safety and quality standards.

Permit to Work

An integrated platform for issuing and managing work permits electronically to ensure work is carried out according to the highest safety standards.

The Electronic Permit to Work System within the Green Codes platform provides a complete digital solution for issuing and managing all types of work permits with high efficiency. It starts from creating and approving the permit, followed by reviewing safety requirements and approvals, and ends with final closure after the work is completed. The system allows organizations to issue permits easily through the web platform or mobile application, with real-time status tracking and automatic notifications, helping ensure that work is performed safely and in full compliance with safety procedures.

The system also supports instant reporting and interactive dashboards to monitor open and closed permits, enabling decision-makers to improve compliance levels and reduce operational risks.

ESG

An integrated platform for monitoring sustainability indicators, resources, and emissions to support a more efficient and sustainable work environment.

The Environmental and Sustainability System within the Green Codes platform provides a complete digital solution for tracking environmental and sustainability indicators with high efficiency. It starts from recording resource consumption and emissions, followed by analyzing environmental performance indicators, and ends with preparing approved sustainability reports. The system allows organizations to easily monitor environmental performance, helping improve resource efficiency, reduce environmental impact, and support ESG (Environmental, Social, and Governance) initiatives.

The screenshot shows the Green Codes platform interface on a laptop. The top navigation bar includes the Green Codes logo, a search bar, and user information. The left sidebar lists various modules, with 'Water Management' highlighted. The main content area displays the 'Water Management' dashboard, which includes a summary of water metrics (Withdrawal, Consumption, Reuse, Discharge) and a 'Standards Alignment' section. Below these, there is an 'Add Report' button and a form for adding a new report, including fields for Project, Date From, Date To, Withdrawal, Consumption, Discharge, Reuse, Quality Status, Standard Reference, and Notes.

Water Management

Monitor withdrawals, consumption, discharge, and reuse across projects.

Withdrawal	Consumption	Reuse	Discharge
0.0 m³	0.0 m³	0.0 m³	0.0 m³

Standards Alignment

- ISO 46001 Water Efficiency Management Systems (governance, targets, verification).
- GRI 303 Water & Effluents (withdrawals, discharge, and reuse tracking).
- WHO Water Safety Plan principles: risk-based controls for quality.
- UN SDG 6 alignment: clean water, sanitation, and ecosystem protection.

Reports [Add Report](#)

Add Report

Project	Date From	Date To	Withdrawal

ISO 46001

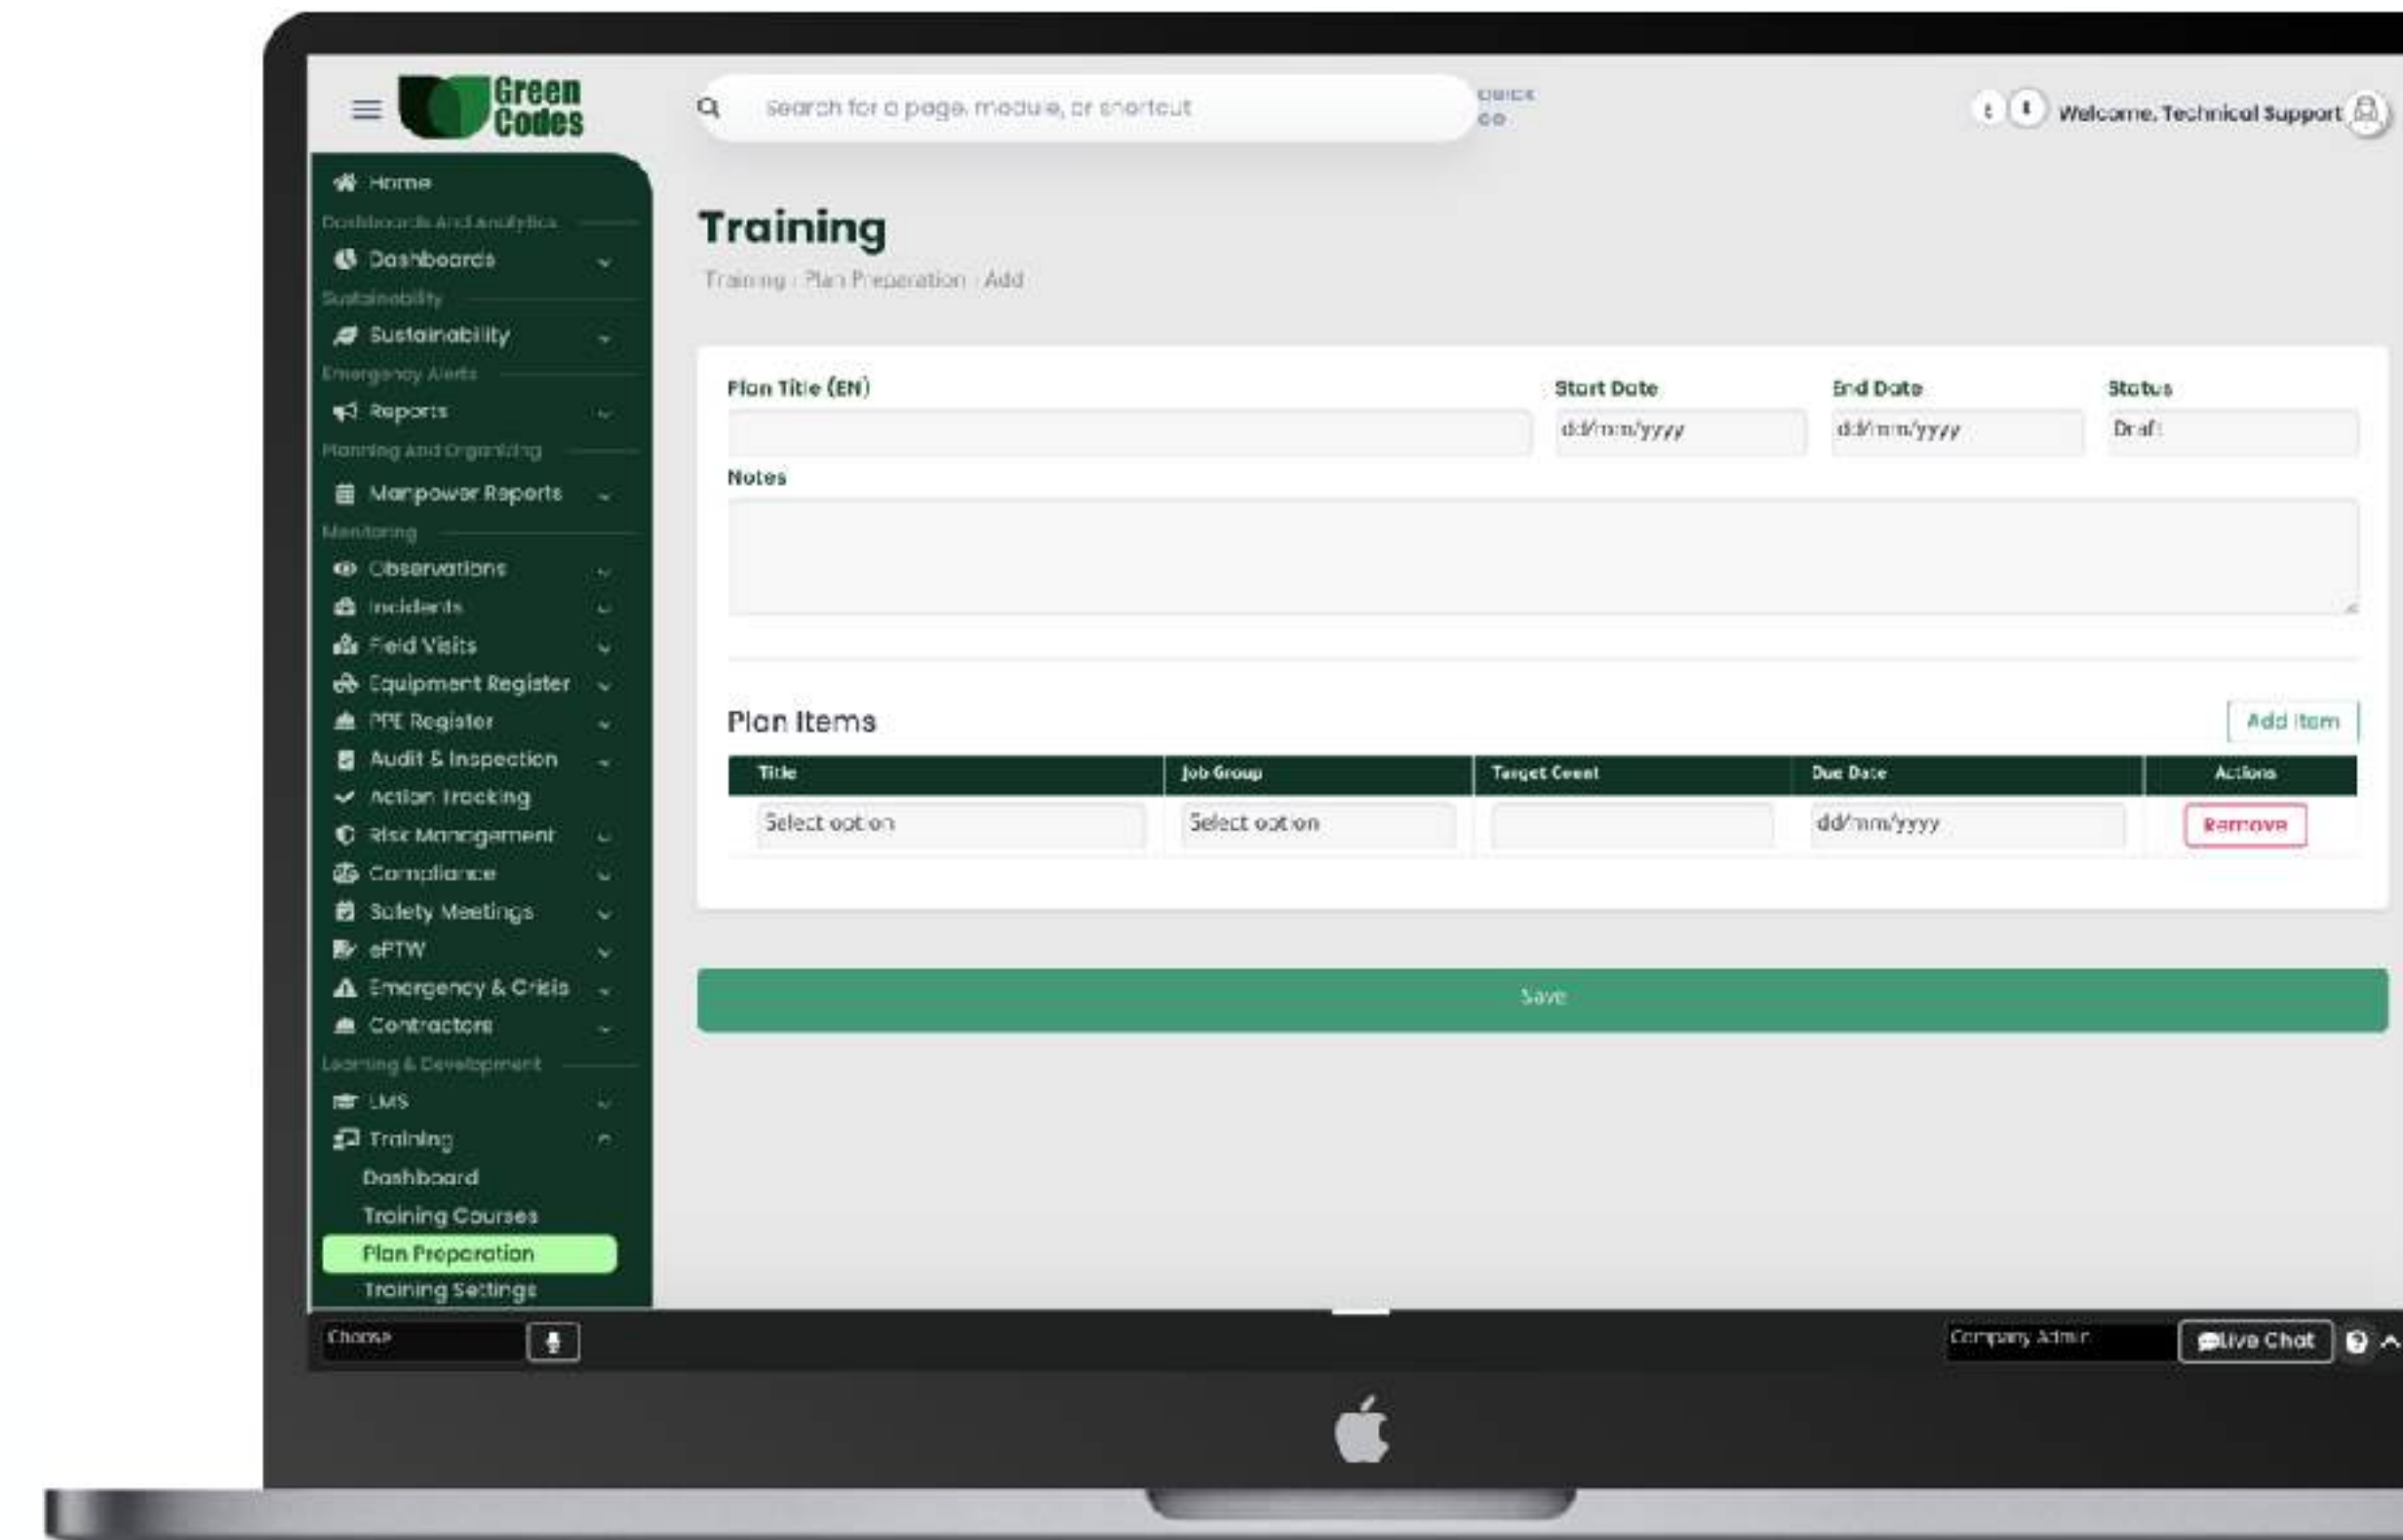

Notes

Training Management

Training Management System within the Green Codes platform provides a complete digital solution for planning, executing, and monitoring training programs efficiently.

It starts with identifying training needs, followed by scheduling courses and assigning employees, and ends with evaluating performance and measuring training outcomes. The system allows organizations to easily track employee attendance, participation, certifications, and overall progress through both the web platform and mobile application, helping improve workforce competency and operational readiness.

It also supports linking training programs to job roles, compliance requirements, and competency matrices, ensuring that employees receive the right training at the right time to maintain safety standards and professional development.

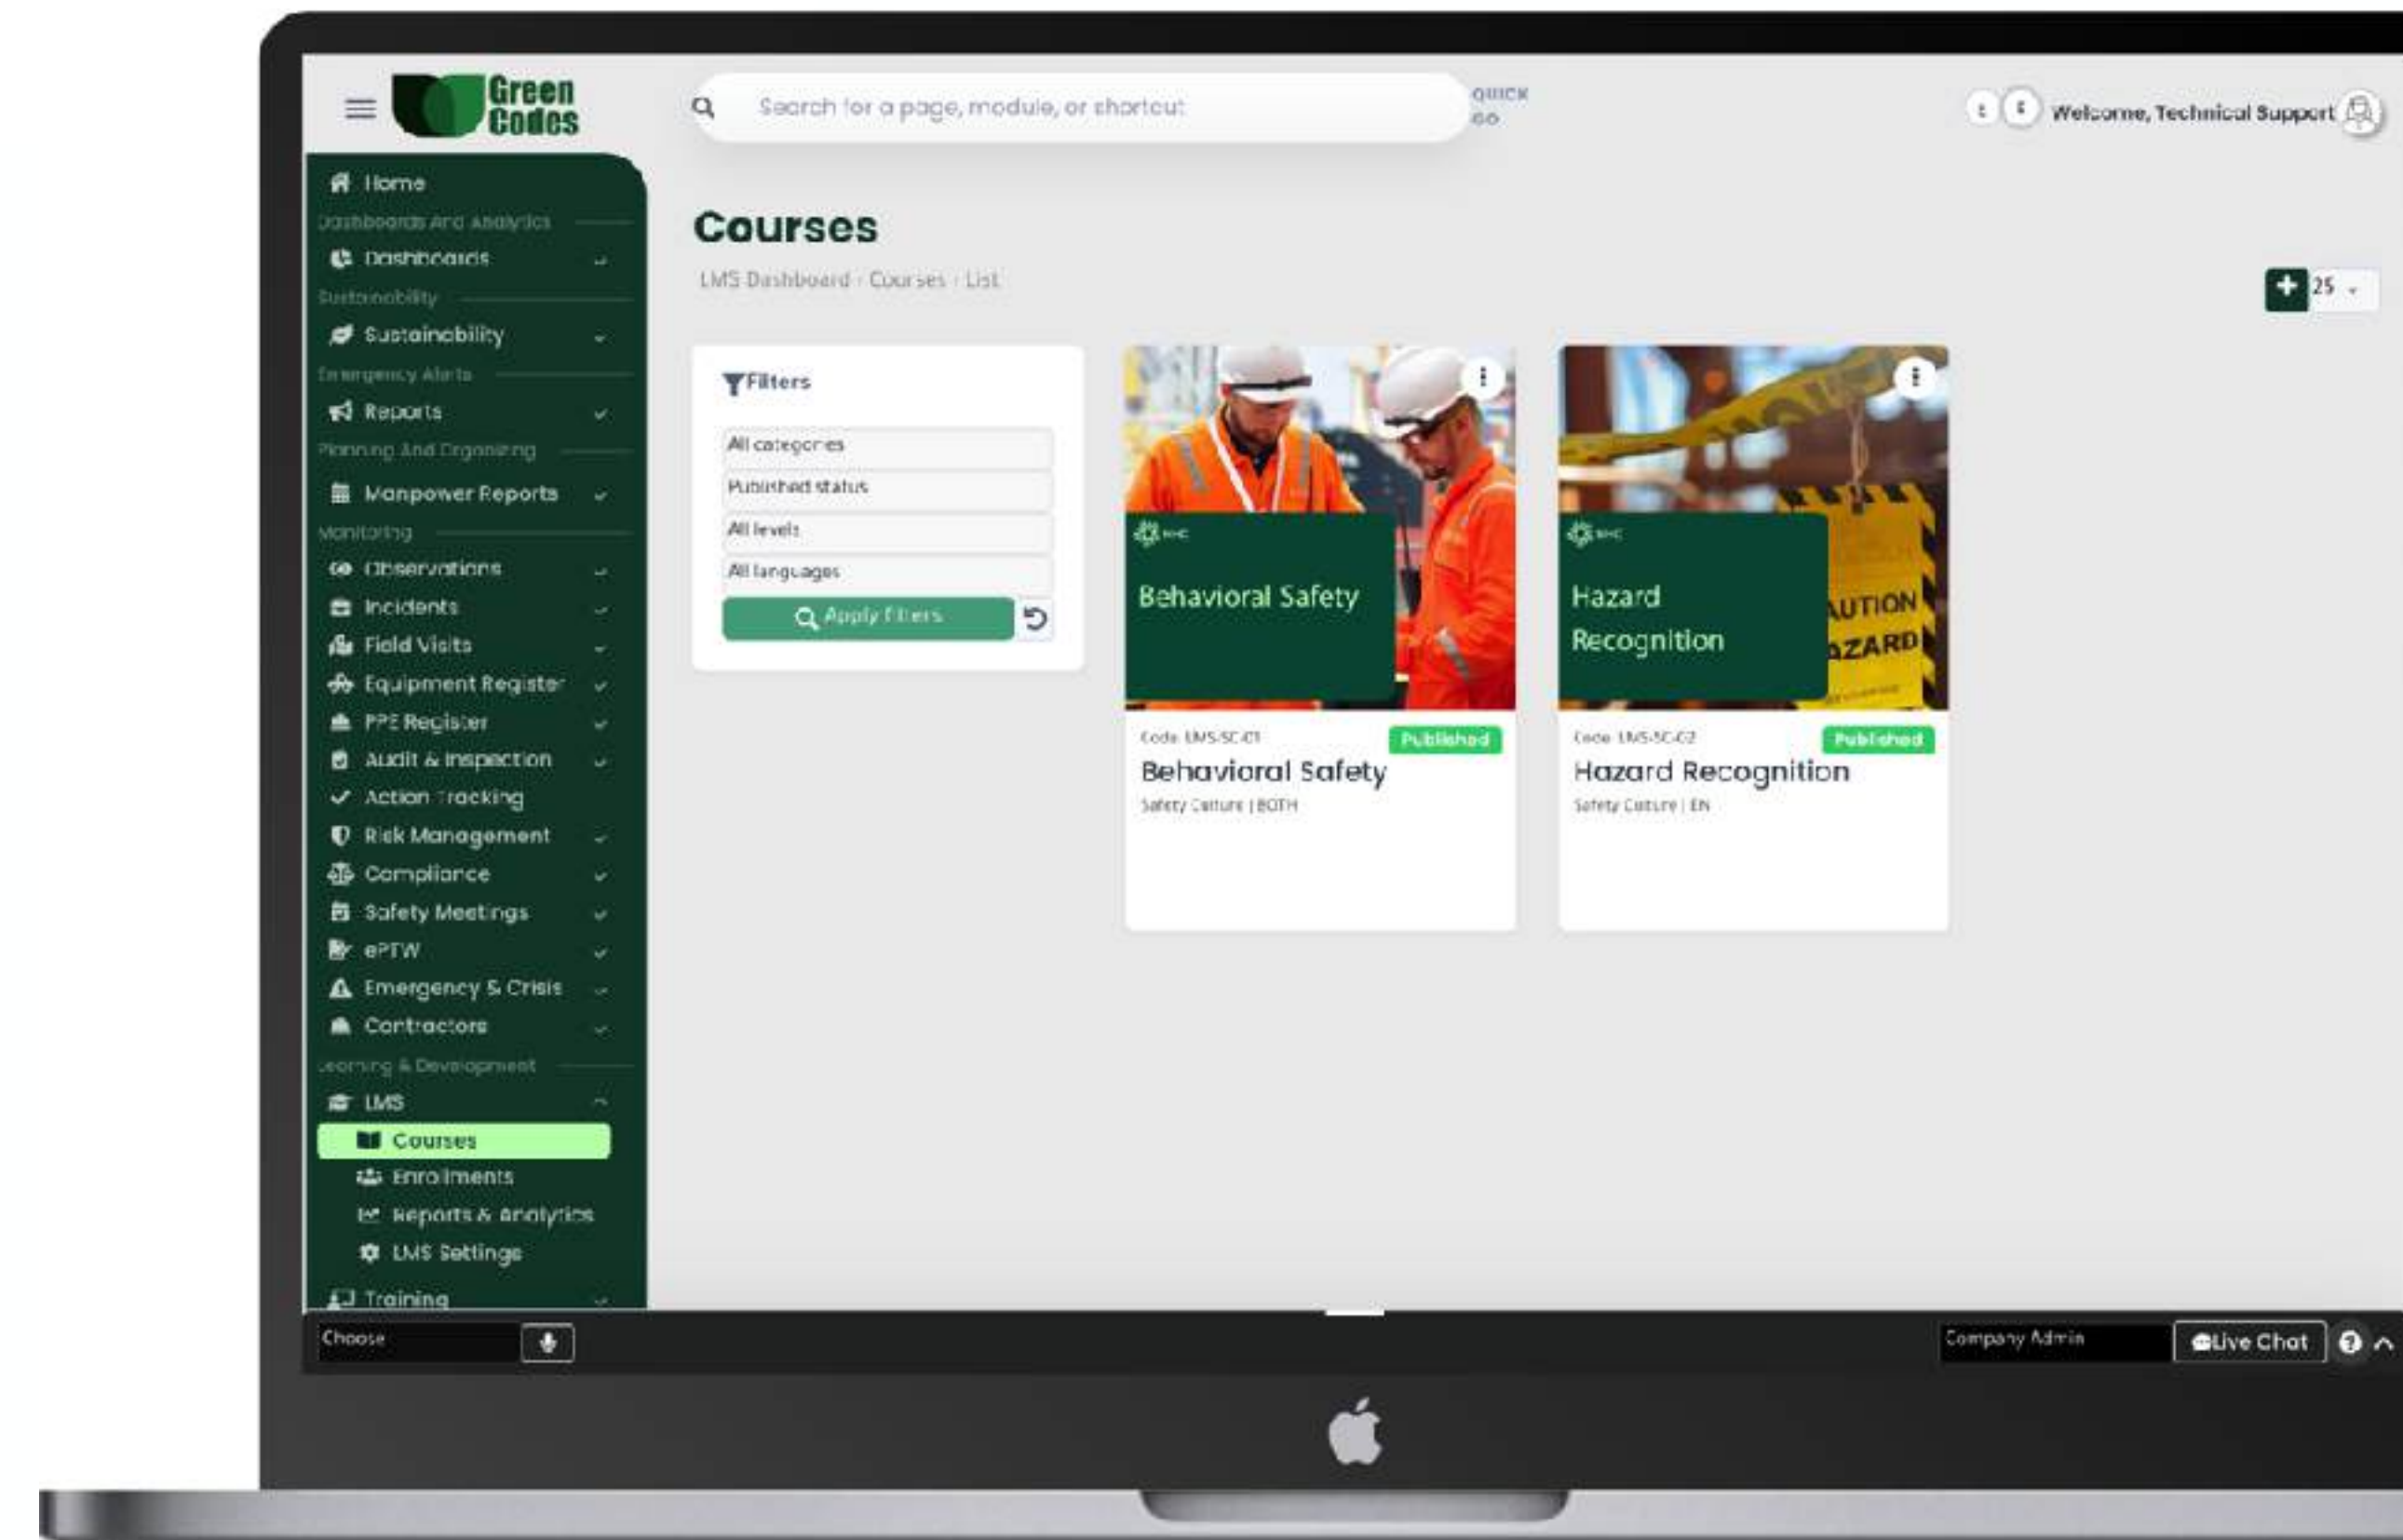

Learning Management System (LMS)

An integrated platform for managing e-learning courses, tracking trainee progress, and monitoring results with ease.

The Learning Management System (LMS) within the Green Codes platform provides a complete digital solution for managing online training courses and learning content efficiently, starting from course creation and assessments, through tracking trainee progress, and ending with certificate issuance and performance measurement. .

The system also supports instant reports and interactive dashboards that help monitor learning performance and improve training efficiency

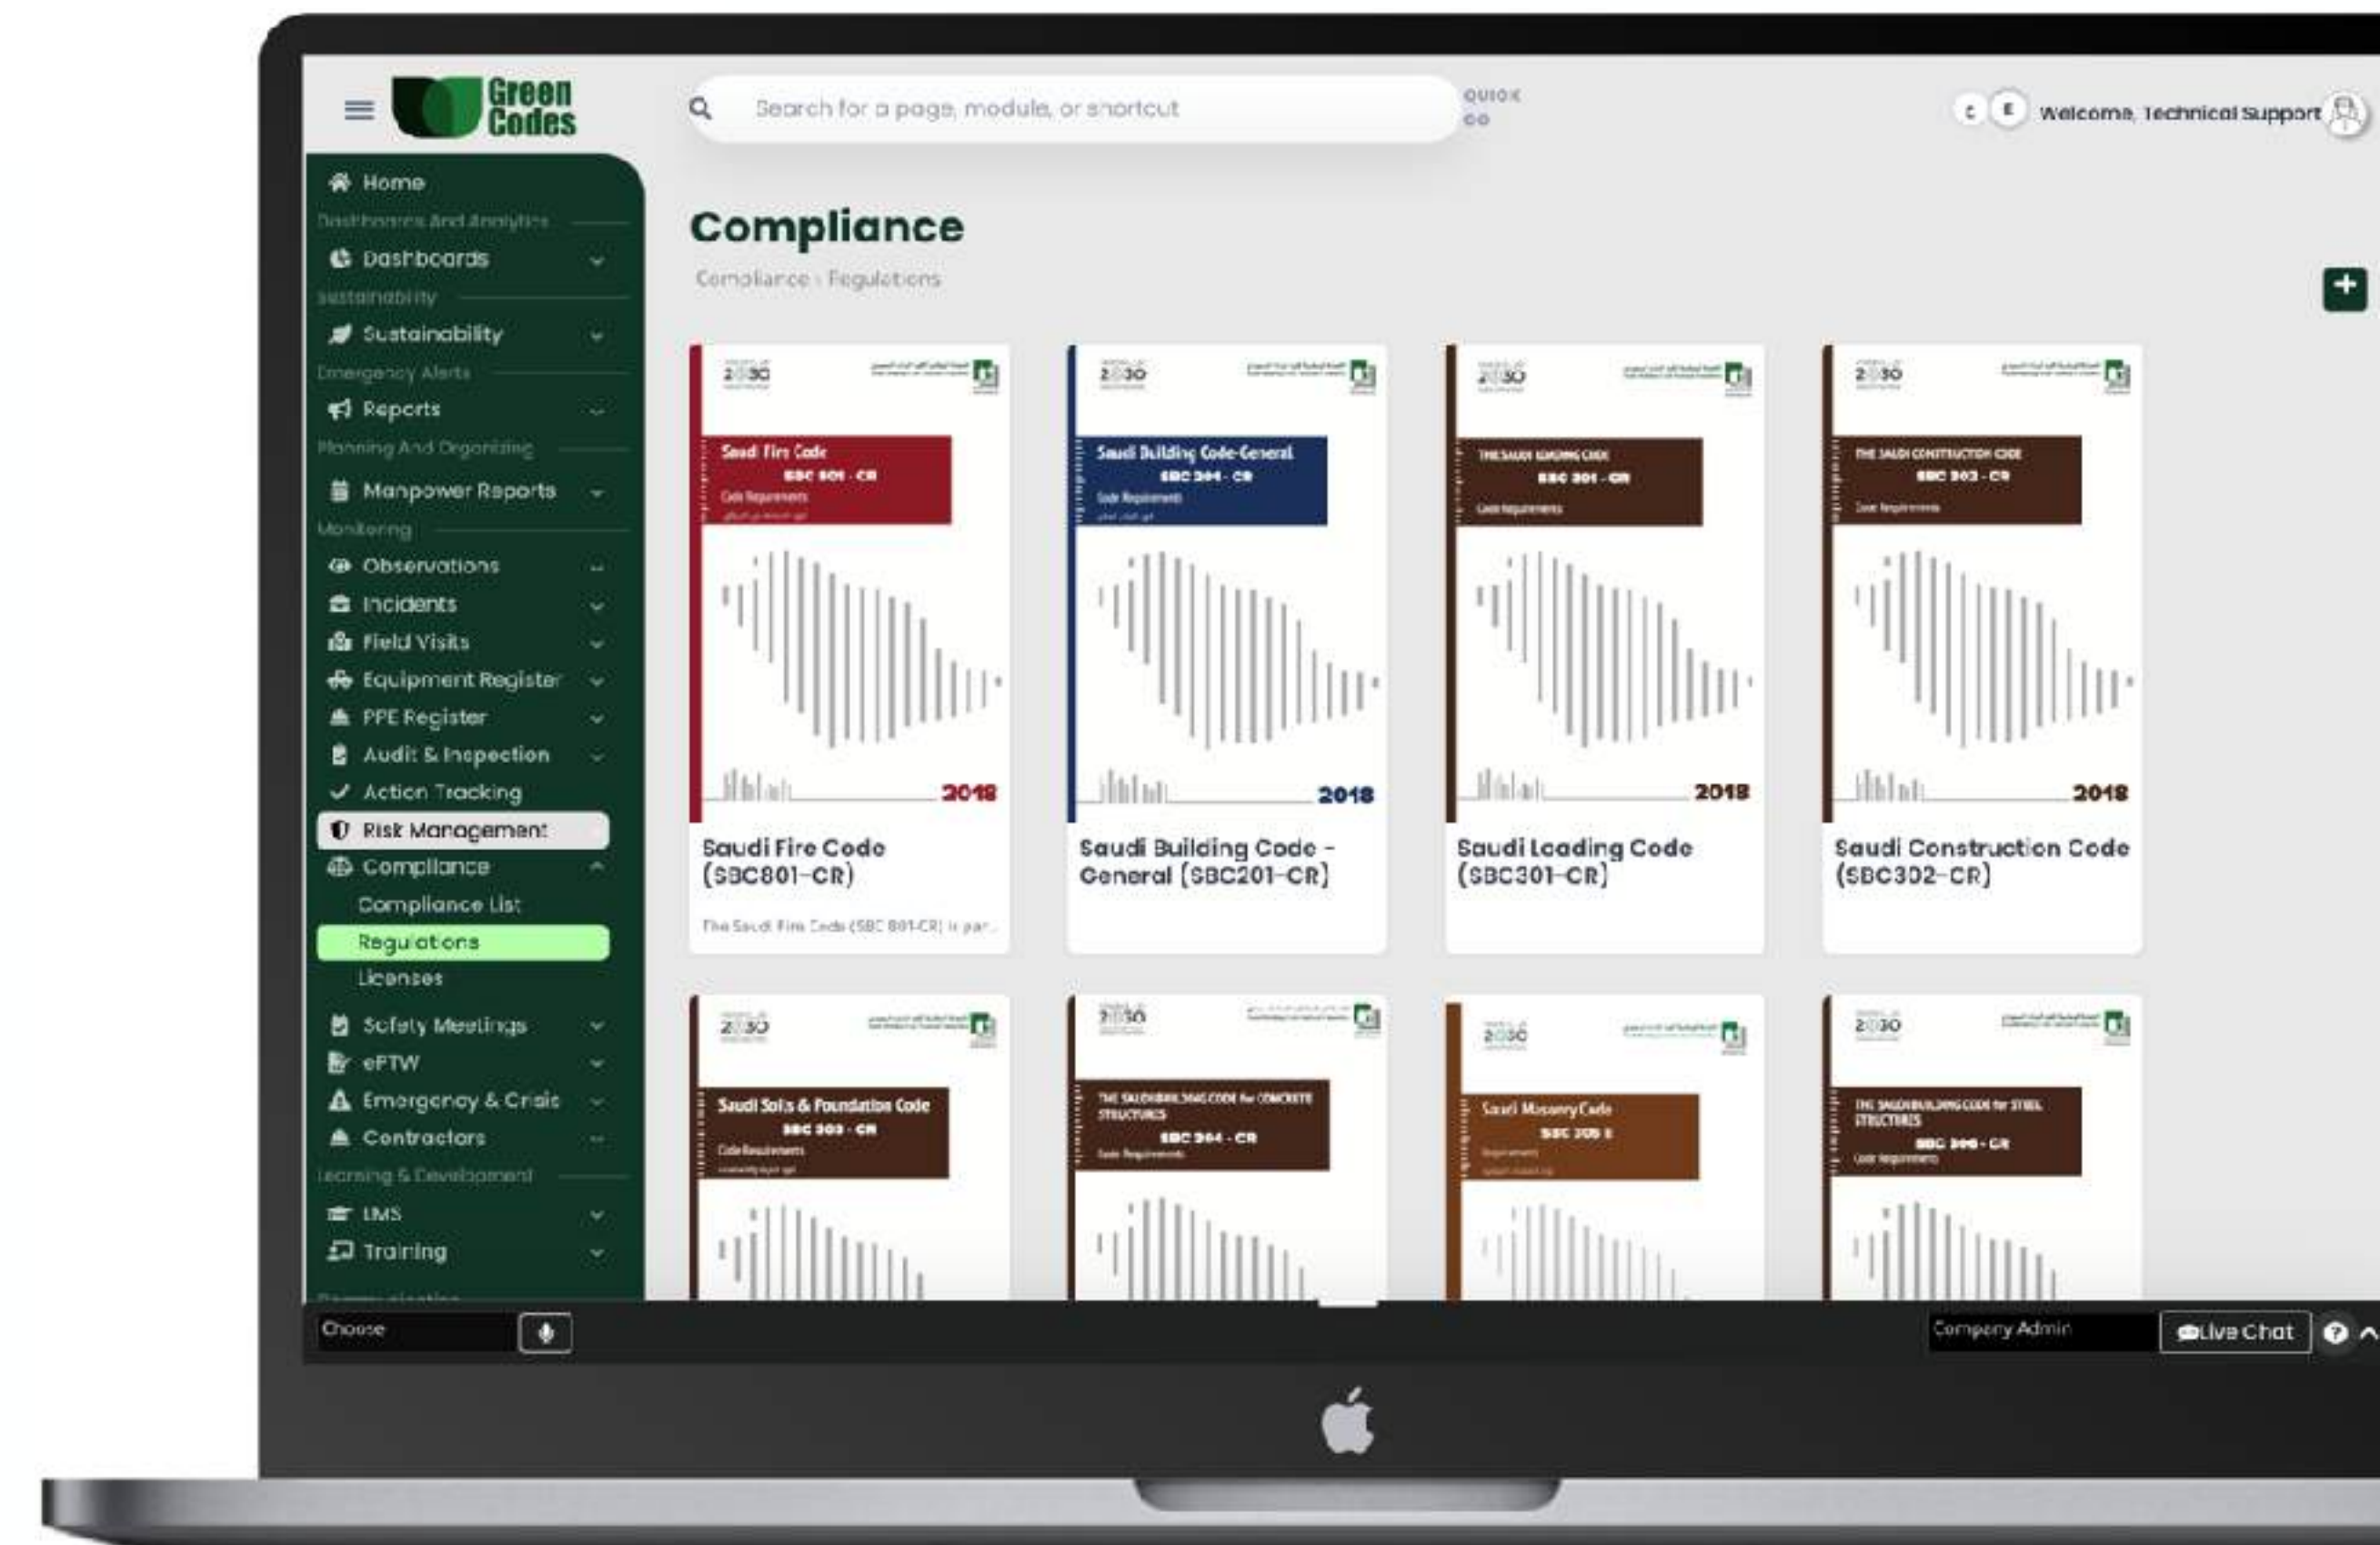

Compliance Management

An integrated platform for monitoring compliance with regulations, policies, and approved standards while promoting best practices.

The Compliance Management System within the Green Codes platform provides a complete digital solution for monitoring compliance with regulations, policies, and approved standards, starting from recording regulatory requirements, followed by tracking compliance status, and ending with implementing corrective actions.

The system also supports instant reports and interactive dashboards that help improve compliance levels and strengthen corporate governance.

Document Management

An integrated platform for managing and centrally storing safety documents with easy access, security, and organized control.

The Document Management System within the Green Codes platform provides a complete digital solution for managing and storing all safety, quality, and compliance documents efficiently. It starts with uploading and centrally classifying documents, followed by organizing different versions and revisions, and ensuring quick search and easy access to approved files. The system enables organizations to securely store policies, procedures, forms, certificates, and attachments through the web or mobile application, with flexible access permissions, helping improve knowledge management and reduce data loss.

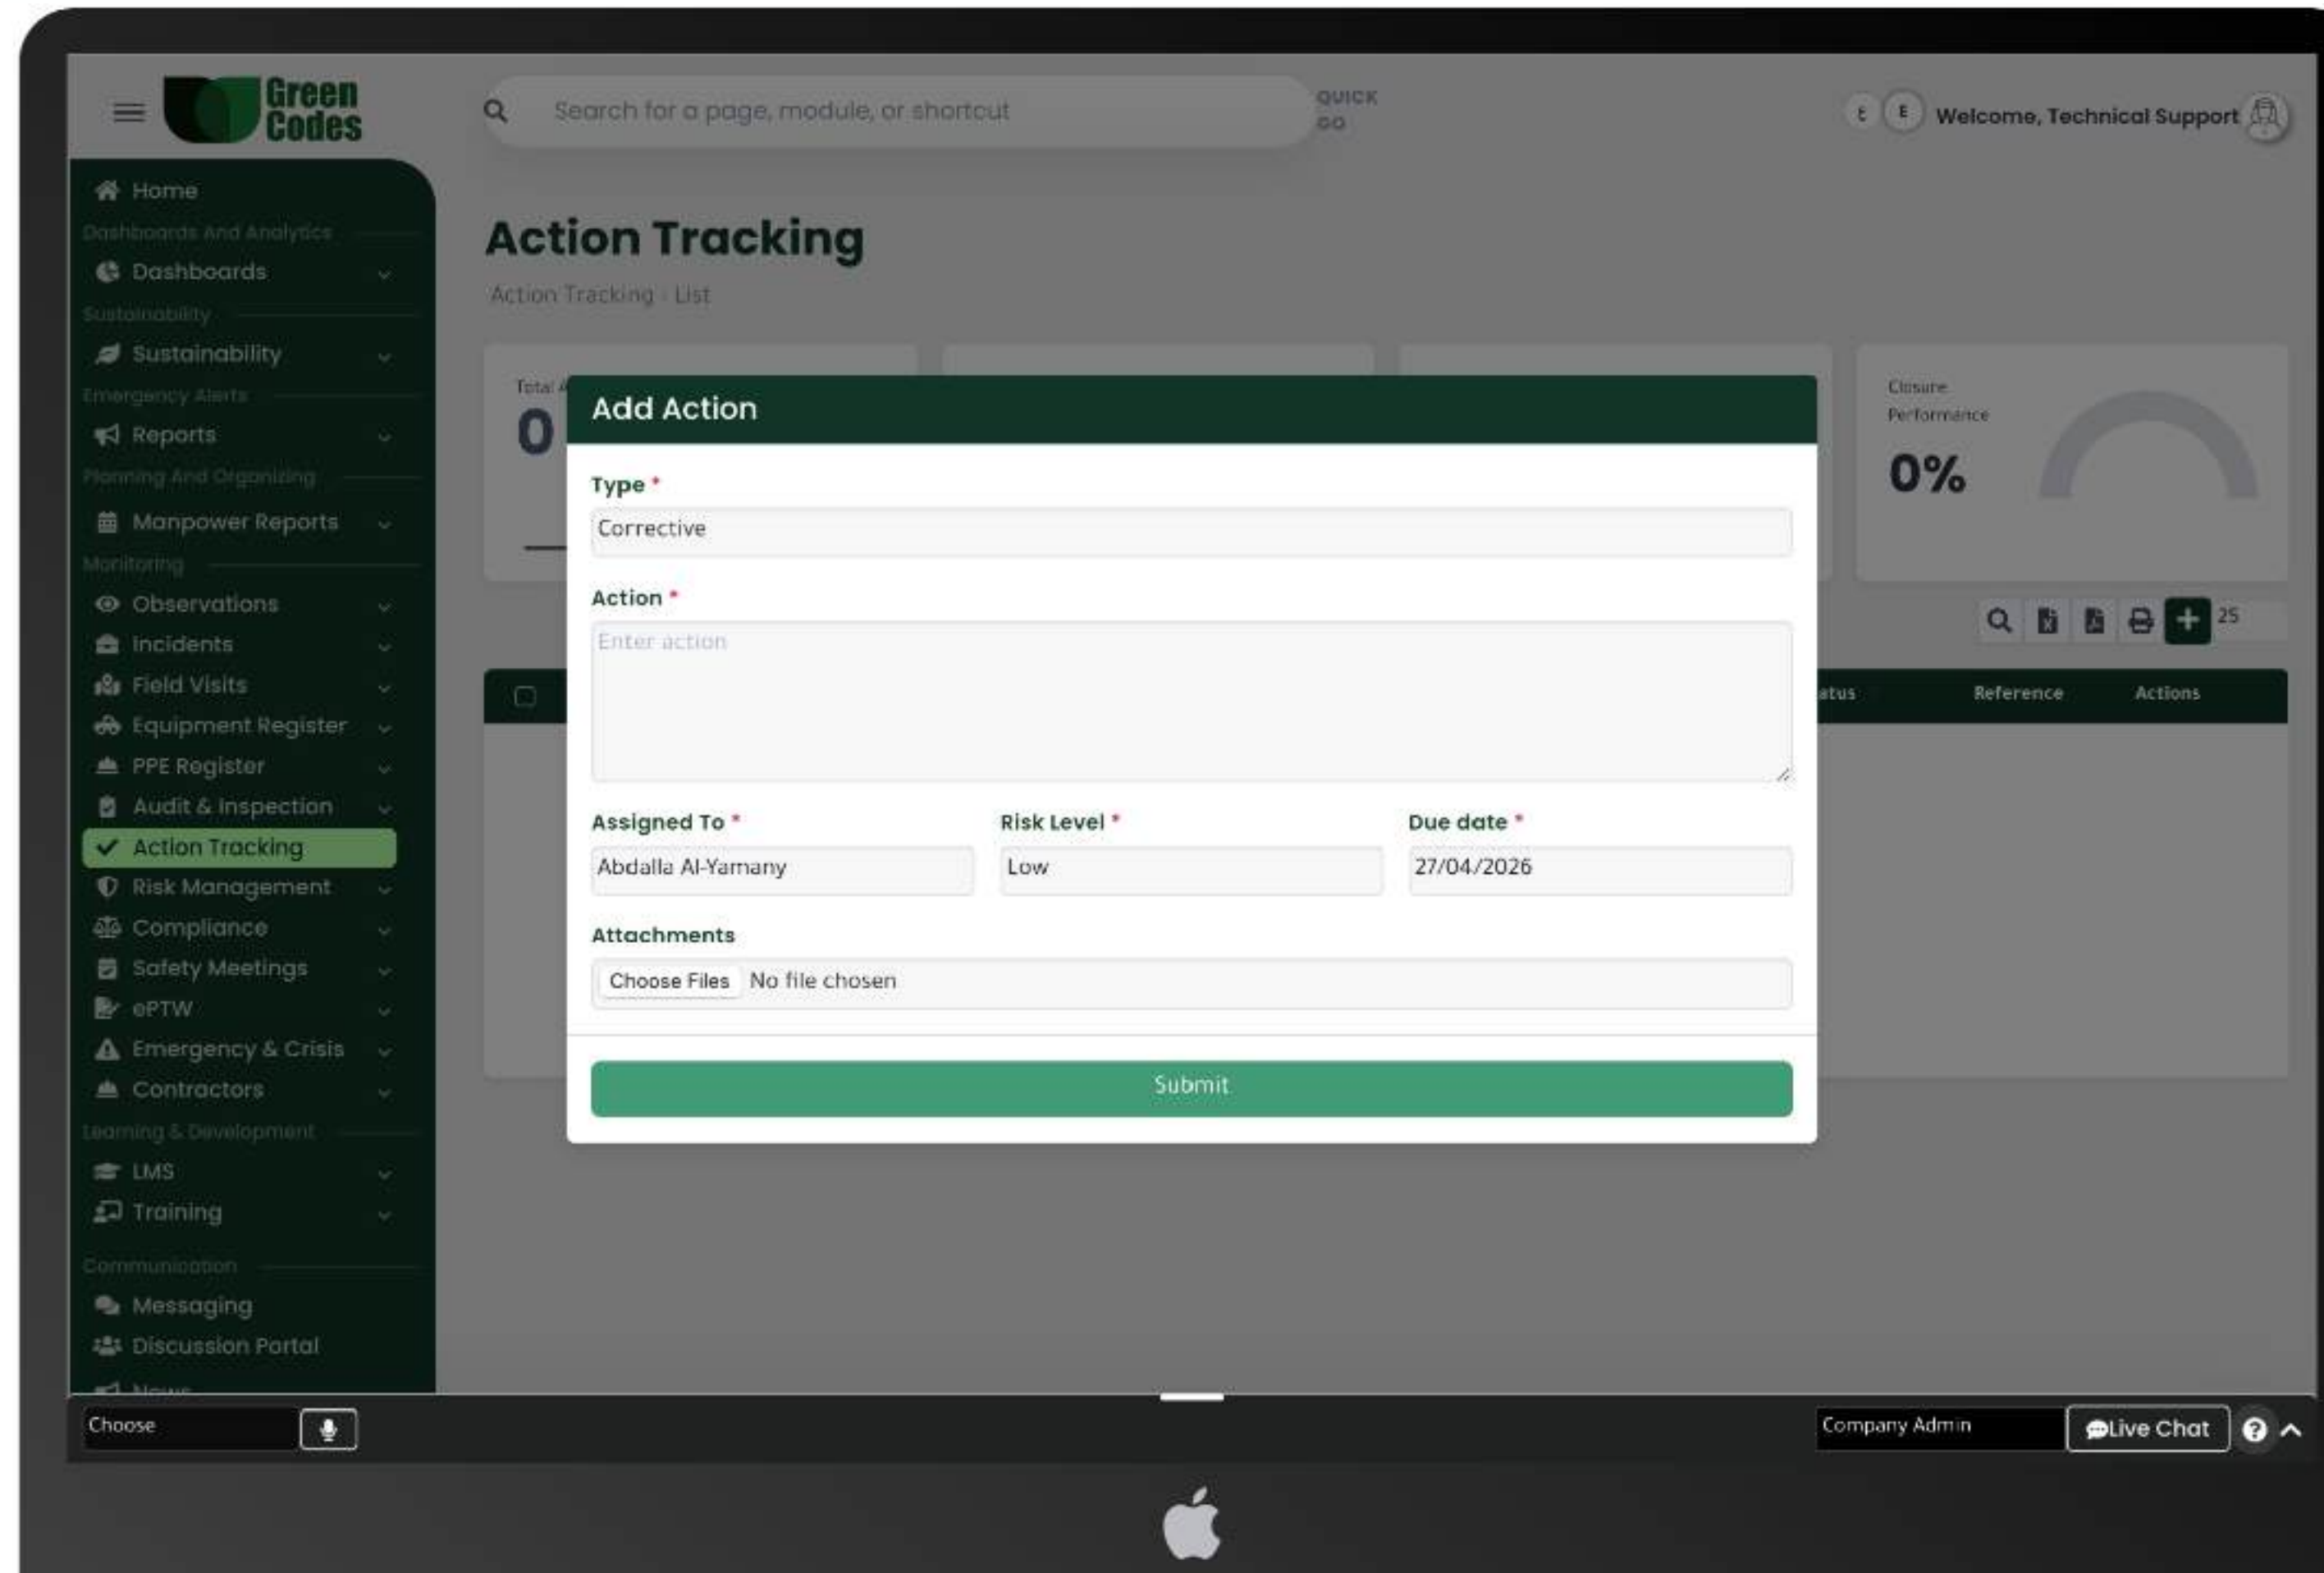

The system also supports instant reports and interactive dashboards to monitor document validity, update dates, and expiry dates, enabling decision-makers to ensure compliance and improve operational efficiency. This comes as part of supporting approved regulations and standards such as the Saudi Building Code (SBC), while enhancing governance and improving access to information within organizations.

Action Tracking

An integrated platform for creating tasks, assigning them, and monitoring execution to ensure fast completion and timely closure of actions.

The Task Tracking System within the Green Codes platform provides a complete digital solution for managing all tasks, corrective actions, and preventive actions efficiently. It starts with creating tasks and assigning them to the relevant teams, followed by monitoring execution status and due dates, all the way to closing actions after verifying completion. The system enables organizations to track all tasks through the web or mobile application, with instant notifications and automatic reminders, helping improve response speed and ensure timely completion.

The system also supports instant reports and interactive dashboards to monitor completion rates and closure performance, enabling decision-makers to improve operational efficiency and reduce delays in implementing actions. This comes as part of supporting a culture of effective follow-up and compliance within organizations and projects.

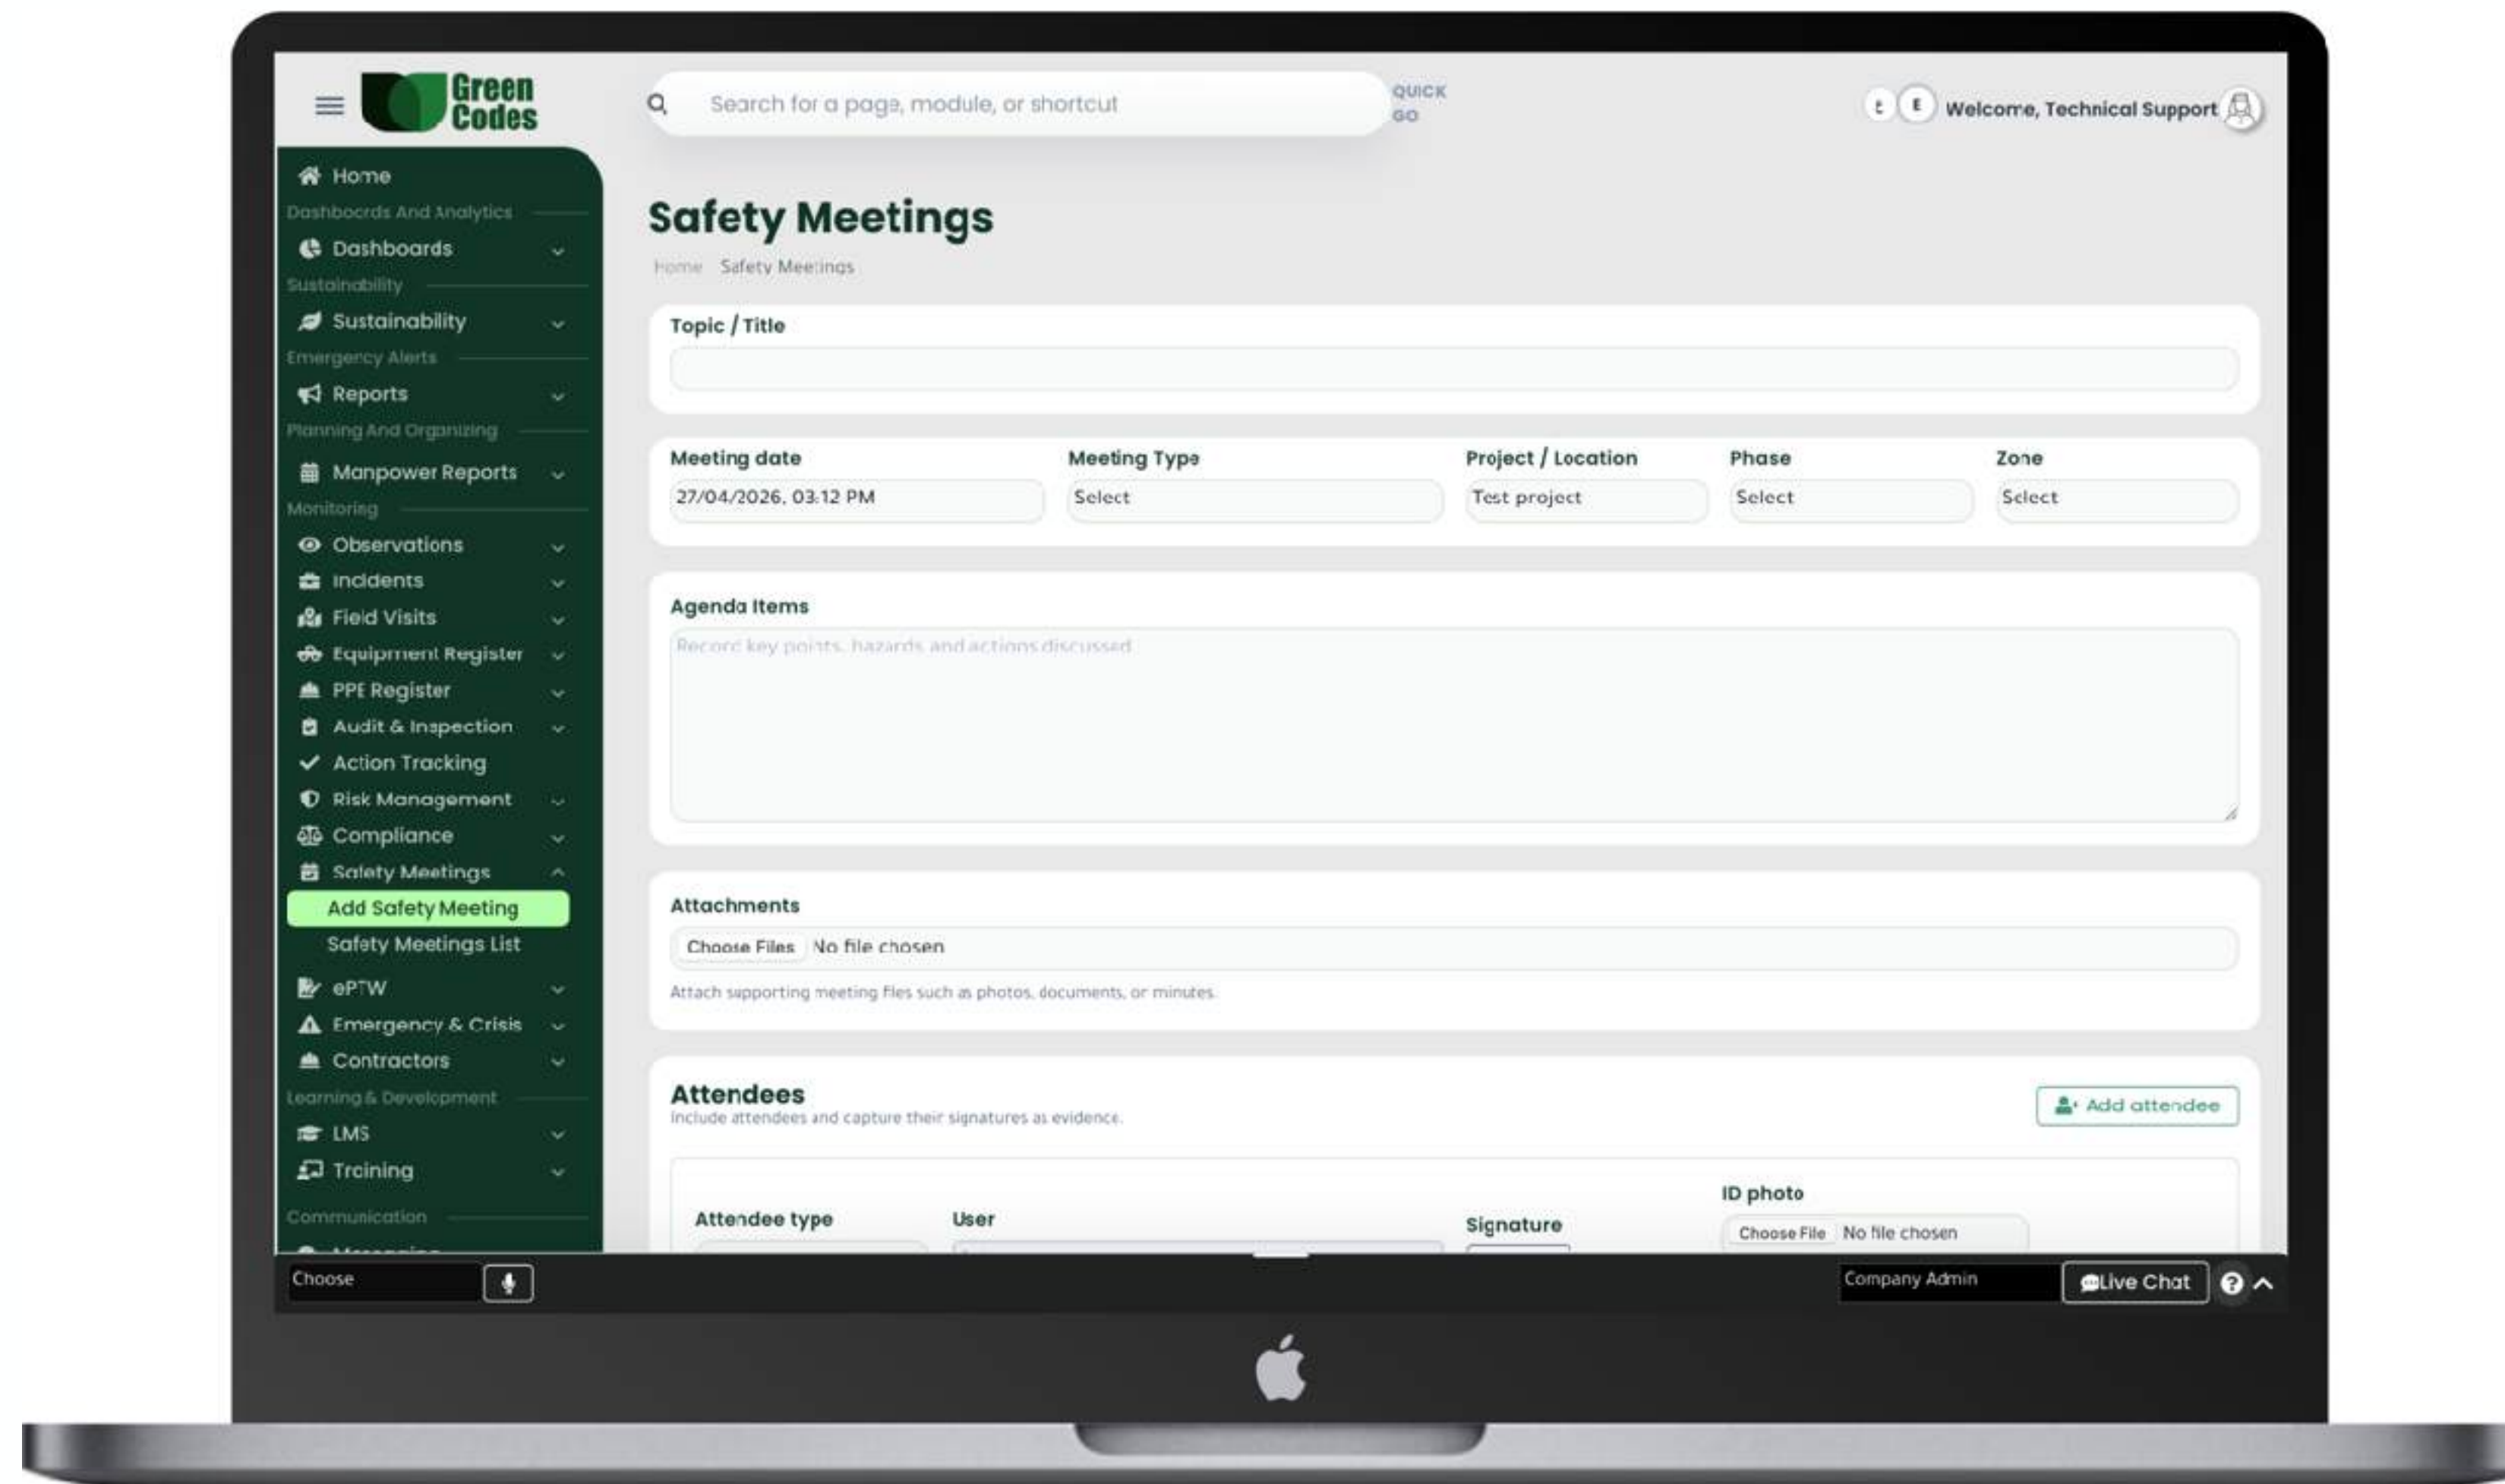

Safety Meetings

An integrated platform for organizing safety meetings, documenting decisions and recommendations, and efficiently tracking their implementation.

The Meeting Management System within the Green Codes platform provides a complete digital solution for organizing and documenting safety and quality meetings with high efficiency, starting from scheduling meetings and defining attendees, through recording meeting minutes and decisions, all the way to tracking the implementation of recommendations and resulting actions. The system enables organizations to manage meetings easily through the web or mobile application, with the ability to attach files and notes, helping improve coordination between different teams.

It also supports instant reports and interactive dashboards that help monitor open recommendations and completion rates, enabling decision-makers to strengthen communication and ensure decisions are implemented on time. This comes as part of supporting an organized work environment and improving coordination efficiency within organizations.

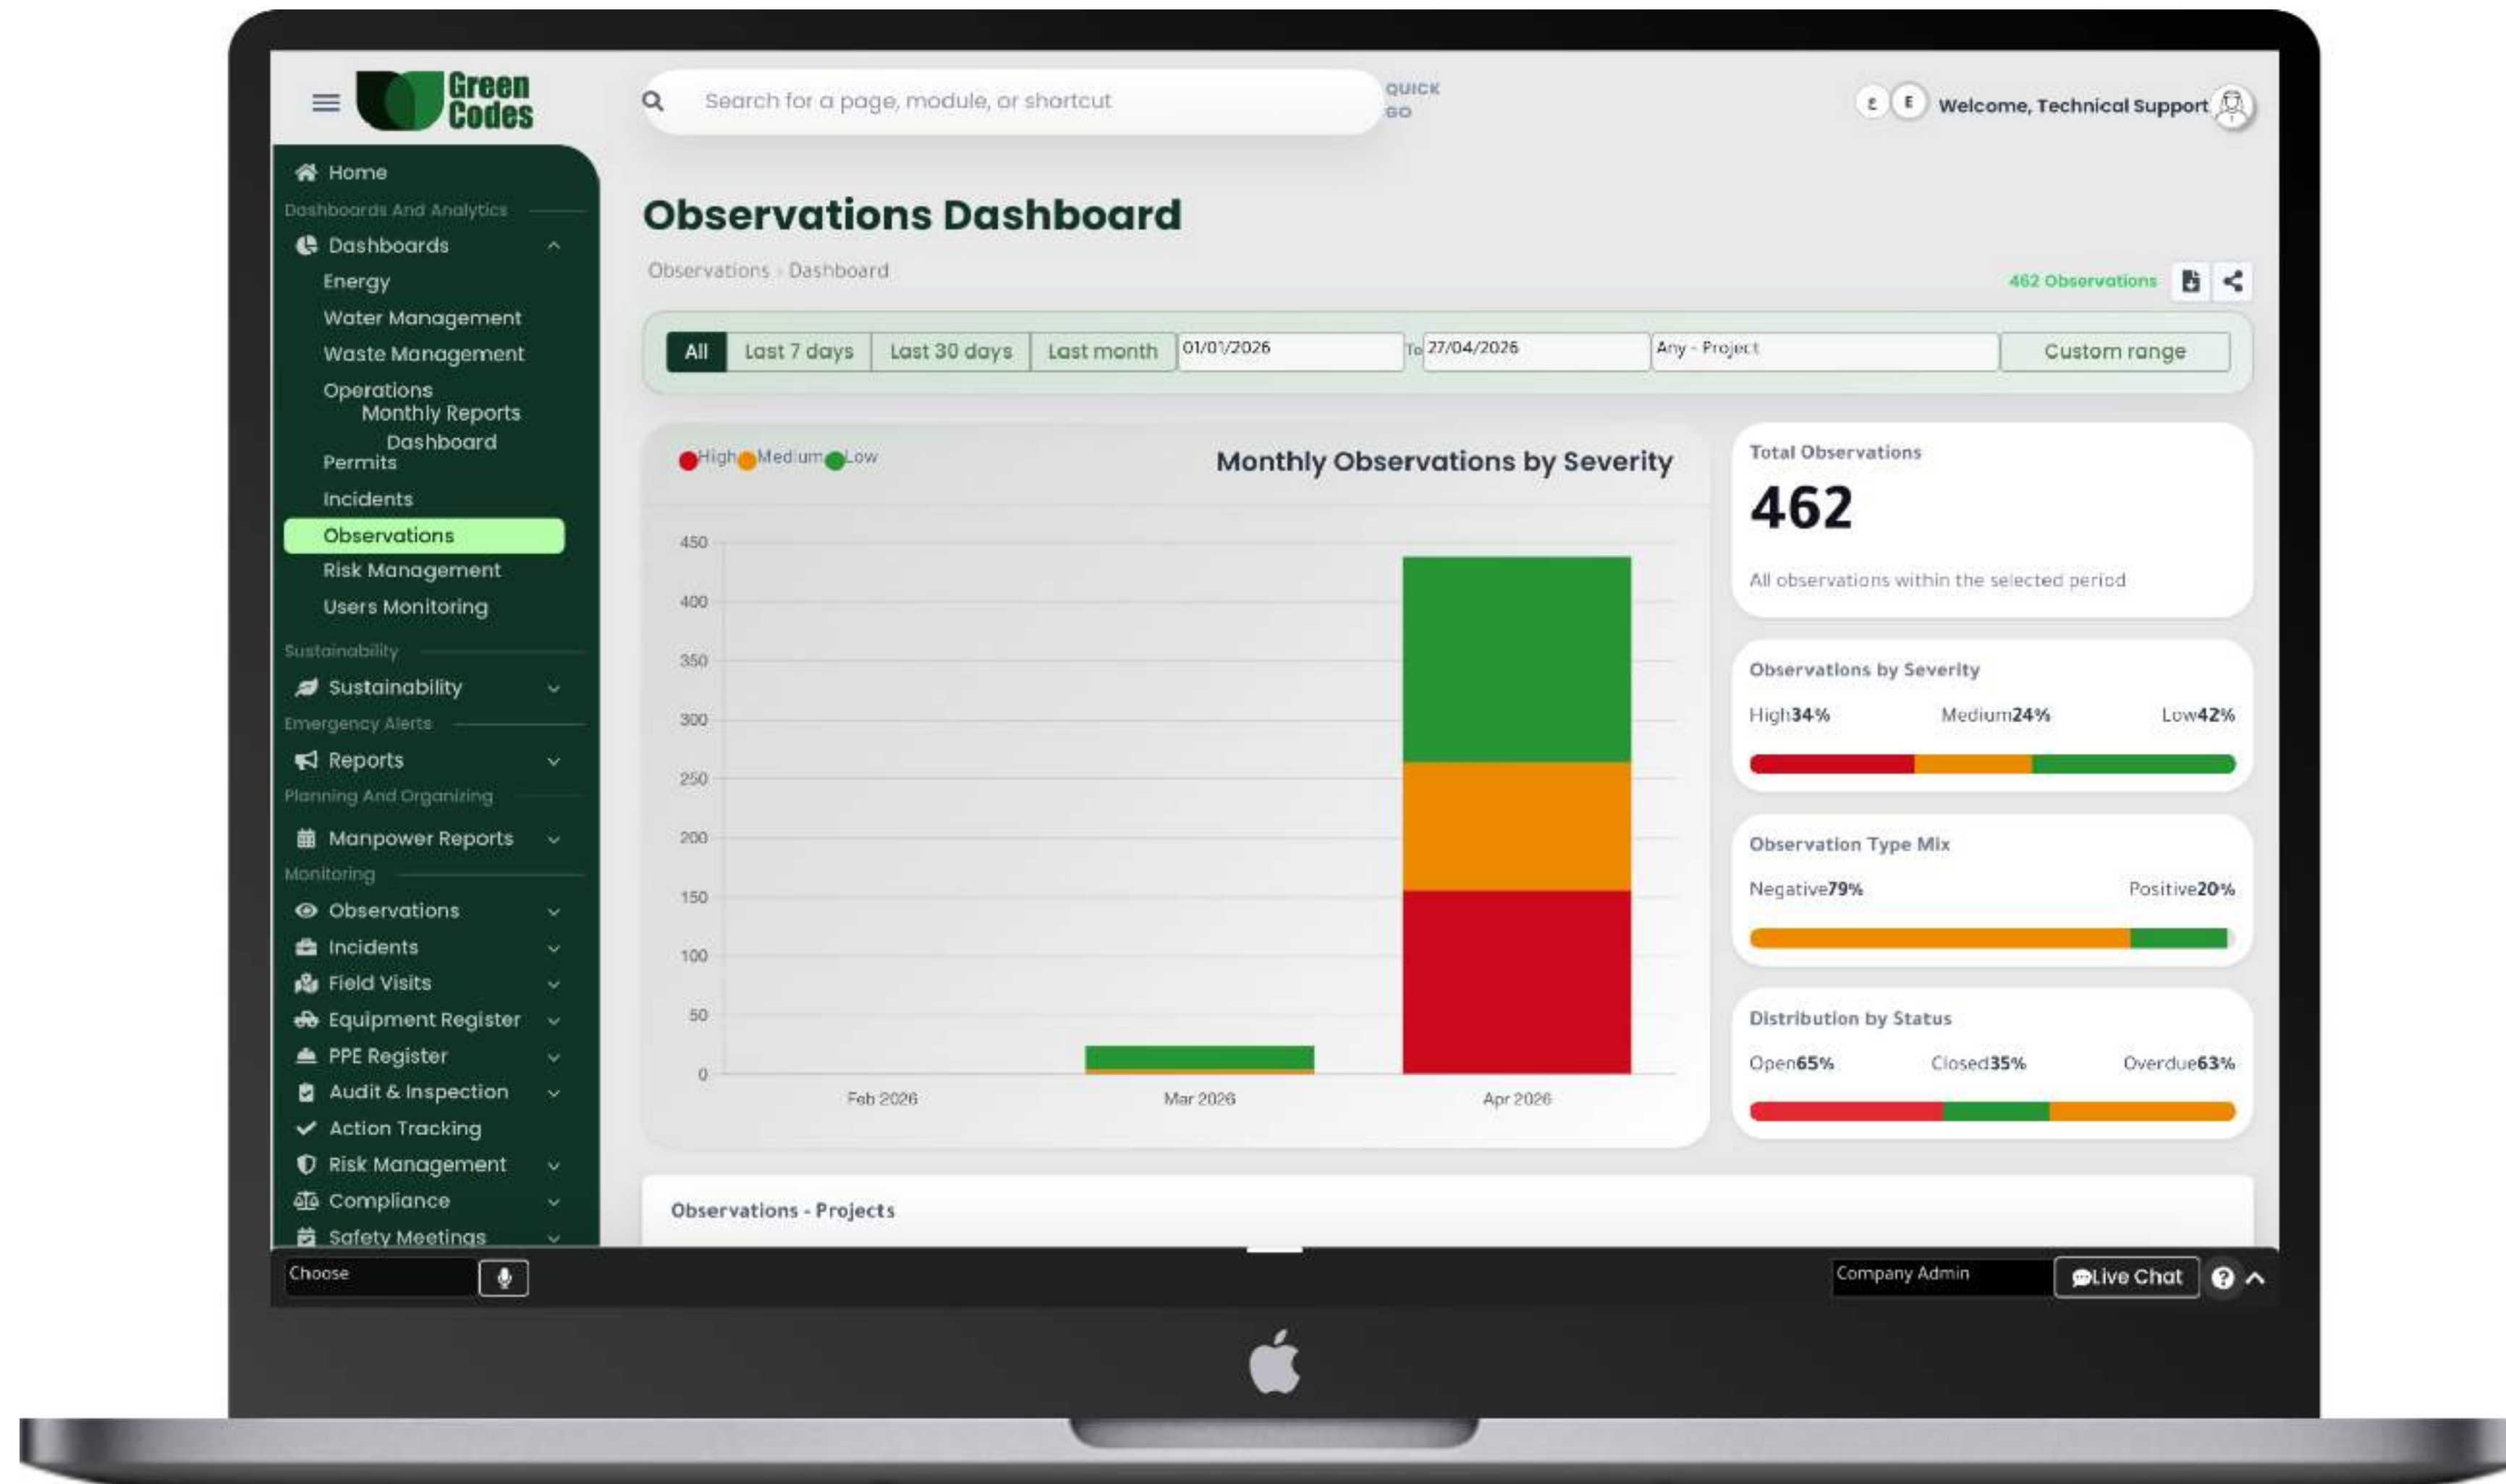

Reports and Dashboards

An integrated platform for generating reports and interactive dashboards that support analysis and real-time decision-making.

The Reports and Analytics System within the Green Codes platform provides a complete digital solution for transforming operational data into smart reports and dashboards, starting from collecting data from different modules, through analyzing trends and performance indicators, all the way to generating real-time reports that support decision-making. The system enables organizations to display data through charts, graphs, and interactive KPIs, helping improve the overall visibility of performance.

It also supports instant reports and interactive dashboards that help monitor performance and analyze trends, enabling decision-makers to take proactive actions and improve the work environment. This comes as part of supporting smart management for organizations and projects.
